

CEMS Issues Discussed with KECO

Yue-Shih Chen, Yi-Peng Jen and Tsung-Wen Chien

Dec. 20, 2016

-
- ▶ Ms. Yue-Shih Chen (陳月詩)
 - ▶ **Environmental Technical Specialist**, Department of Air Quality Protection and Noise Control, Environmental Protection Administration, Executive Yuan, R.O.C. (Taiwan)
 - ▶ Contact person of the CEMS project
 - ▶ Ms. Yi-Peng Jen (任怡芃)
 - ▶ **Associate Technical Specialist**, Department of Air Quality Protection and Noise Control, Environmental Protection Administration, Executive Yuan, R.O.C. (Taiwan)

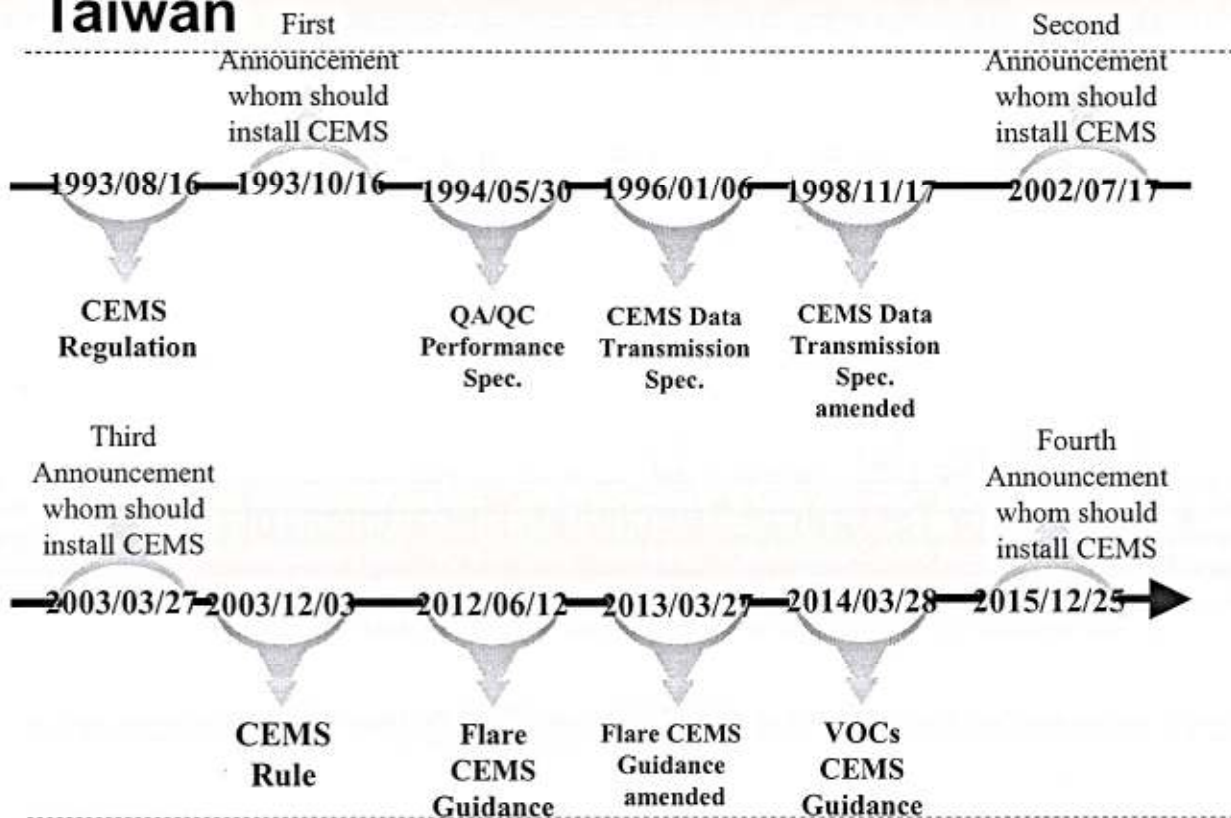

Chronology of CEMS management in Taiwan

- ▶ 1993: CEMS regulation promulgated
- ▶ 1994: Performance Specification of QA/QC
- ▶ 2001: CEMS data online reporting
- ▶ 2003: CEMS regulation amendment
- ▶ 2016: CEMS regulation amending

▶ 3

2016/12/20

Chronology of CEMS management in Taiwan

▶ 4

2016/12/20

-
- ▶ 1993: First Announcement whom should install CEMS
 - ▶ 2002: Second Announcement whom should install CEMS
 - ▶ 2003: Third Announcement whom should install CEMS
 - ▶ 2002: Air Pollution Control and Emissions Standards for the Semiconductor Industry (NMHC & Flow CEMS)
 - ▶ 2006: Optoelectronic Material and Element Manufacturing Industry Air Pollution Control and Emission Standards (NMHC & Flow CEMS)
 - ▶ 2007: Adhesive Tape Manufacturing Industry Air Pollution Control and Emission Standards (NMHC & Flow CEMS)
 - ▶ 2011: Volatile Organic Compounds Pollution Control and Emissions Standards for the Stationary Pollution Source (Flare CEMS: NMHC, HRVOCs, Flow)
 - ▶ 2015: Fourth Announcement whom should install CEMS
 - ▶ 2016: CEMS data open to the public

-
- ▶ There are 324 installed CEMS required by 1st ~ 3rd announcements in Taiwan Now
 - ▶ There are 13 of CEMS for 4th announcement whom should install CEMS. They have to be installed and certified before 2017/12/24
 - ▶ There are 144 installed Flare CEMS
 - ▶ There are 134 installed NMHC & Flow CEMS in Optoelectronic Material and Element Manufacturing Industry
 - ▶ The CEMS data are reporting **to local authorities (EPB)** real-time, daily and monthly.

Monitoring Items (1/3)

| Annou nceme nt | Industries | Sources | Capacity | OP | SO ₂ | TRS | NO _x | HCl | CO | O ₂ | Flow & T |
|----------------------|----------------------------------|--|--|----|-----------------|-----|-----------------|-----|----|----------------|----------|
| 1 | All industries | Solid Fuel-fired or oil-fired units (boilers, non-traffic gas turbines, non-traffic engines) | For same exit stack, Gross heat input rate $\geq 10^8$ Kcal/Hr in the operation permit | √ | √ | | √ | | | √ | √ |
| 1 | | Gas-fired units (boilers, non-traffic gas turbines, non-traffic engines) | For same exit stack, Gross steam generation rate ≥ 130 T/Hr in the operation permit | | | | √ | | | √ | √ |
| 1 | Cement manufacturing industry | Rotary kiln calciner and mills | | √ | | | √ | | | √ | √ |
| 1 | | Clinker coolers | | √ | | | | | | | |
| 1 | Iron and steel smelting industry | Electric arc furnace | | √ | | | | | | | |
| 2 | All industries | Municipal and general industrial waste incinerators | Design Capacity ≥ 10 T/Hr in the operation permit | √ | | | √ | √ | √ | √ | √ |

▶ 7

Monitoring Items (2/3)

| Annou nceme nt | Industries | Sources | Capacity | OP | SO ₂ | TRS | NO _x | HCl | CO | O ₂ | Flow & T |
|----------------------|--|--|---|----|-----------------|-----|-----------------|-----|----|----------------|----------|
| 3 | All industries | Solid Fuel-fired or oil-fired units (boilers, non-traffic gas turbines, non-traffic engines) | For same exit stack, Gross heat input rate is equal to or greater than 6.15×10^7 Kcal/Hr, but less than 10^8 Kcal/Hr in the operation permit | √ | √ | | √ | | | √ | √ |
| 3 | | Gas-fired units (boilers, non-traffic gas turbines, non-traffic engines) | For same exit stack, Gross steam generation rate is equal to or greater than 80 T/Hr, but less than 130 T/Hr in the operation permit | | | | √ | | | √ | √ |
| 3 | Petroleum refining and petrochemical manufacturing | Solid Fuel-fired or oil-fired reheating furnaces and cracking furnaces | For same exit stack, Gross heat input rate $\geq 6.15 \times 10^7$ Kcal/Hr in the operation permit | √ | | | √ | | | √ | √ |
| 3 | | Gas-fired reheating furnaces and cracking furnaces, Gas fuel mixing ratio is equal to or greater than 60% of total fuels | For same exit stack, Gross heat input rate $\geq 10^8$ Kcal/Hr in the operation permit | | | | √ | | | √ | √ |

2016/12/20

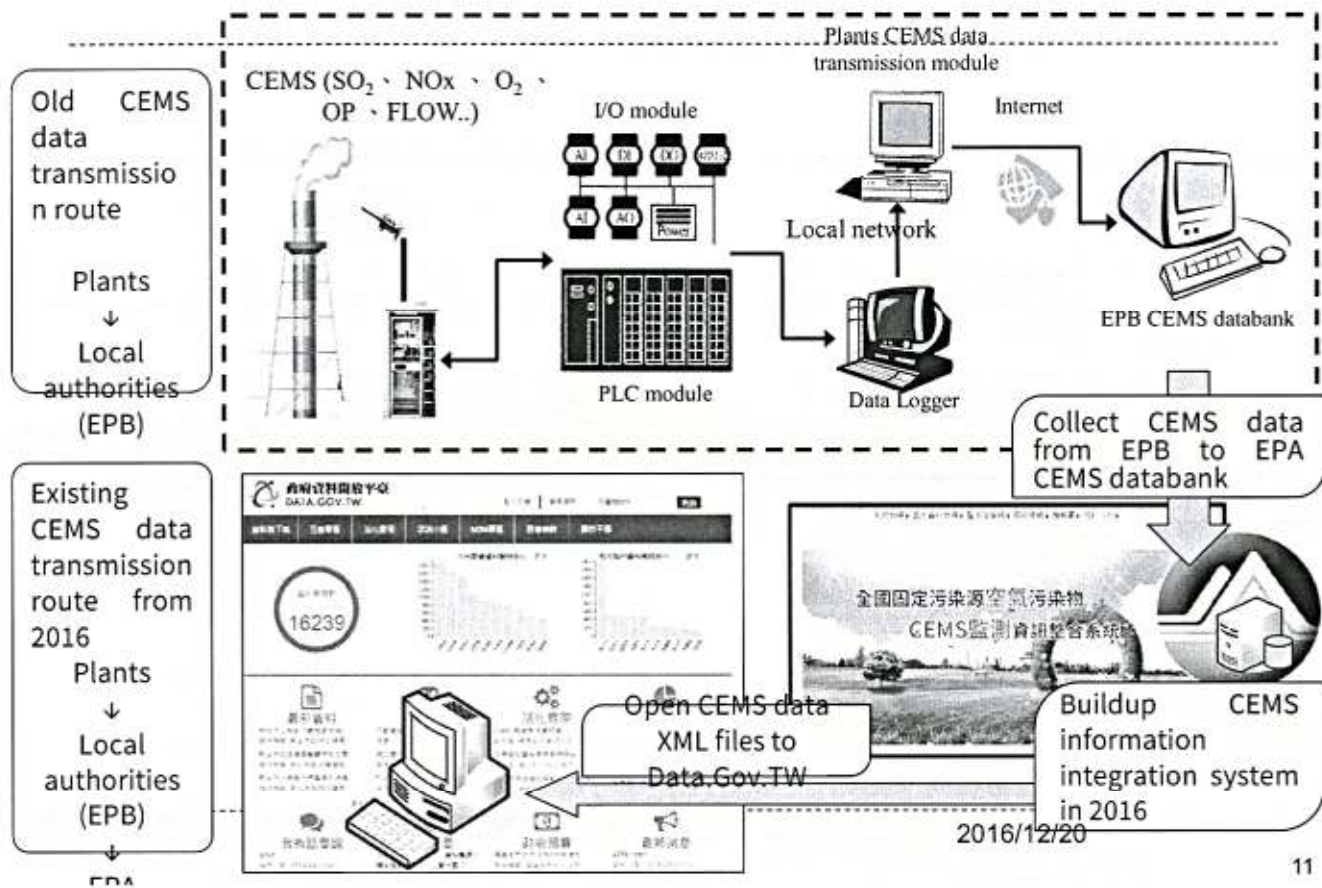

Monitoring Items (3/3)

| Announcement | Industries | Sources | Capacity | OP | SO ₂ | TRS | NO _x | HCl | CO | O ₂ | Flow & T |
|--------------|----------------------------------|---|---|----|-----------------|-----|-----------------|-----|----|----------------|----------|
| 3 | Iron and steel smelting industry | Coke ovens | All | √ | √ | | √ | | | √ | √ |
| 3 | | Sintering furnaces | All | √ | √ | | √ | | | √ | √ |
| 4 | Pulp manufacturing | Recovery boilers | All | √ | | √ | | | | √ | √ |
| 4 | | Lime kilns | All | | | √ | | | | √ | √ |
| 4 | All industries | Municipal and general industrial waste incinerators | Design Capacity is equal to or greater than 4 T/Hr, but less than 10 T/Hr in the operation permit | √ | √ | | √ | √ | √ | √ | √ |

CEMS Data Transmission Route 架構

建置全國CEMS資訊整合系統

Purpose and Usage of CEMS in Taiwan

- ▶ Operation of Air Pollution Control Devices
- ▶ Monitoring the emission concentration compared to the emission limits
- ▶ Calculation of the air pollutants emission amounts from stacks of stationary sources
- ▶ Calculation of the air pollution fee from stacks of stationary sources
 - ▶ Emission Trading? Not yet in Taiwan

SO₂ emission from flue gases in Taiwan

| | M_{total} (tonne/a) | M_{EF} (tonne/a) | M_{testing} (tonne/a) | M_{CEMS} (tonne/a) |
|------|---|--|---|-----------------------------------|
| 2007 | 122,326.05 | 5,960.43 | 30410.02 | 85927.65 |
| 2008 | 109,909.62 | 5,374.47 | 26783.19 | 77736.3 |
| 2009 | 101,111.86 | 5,947.9 | 29922.04 | 65194.62 |
| 2010 | 114,860.73 | 14,879.35 | 30381.79 | 69599.56 |
| 2011 | 110,825.95 | 6,971.51 | 30845.96 | 73008.41 |
| 2015 | 86,830 | 4,677 | 18,356.3 | 63,706.5 |
| | M_{EF}/M_{total} (%) | M_{testing}/M_{total} (%) | M_{CEMS}/M_{total} (%) | |
| 2007 | 4.87% | 24.86% | 70.24% | |
| 2008 | 4.89% | 24.37% | 70.73% | |
| 2009 | 5.88% | 29.59% | 64.48% | |
| 2010 | 12.95% | 26.45% | 60.59% | |
| 2011 | 6.29% | 27.83% | 65.88% | |
| 2015 | 5.49% | 21.14% | 73.37% | |

13

Number of SO₂ CEMS Stacks: 242 (2.17%), Total number of stacks: 11,163 in 2015

NO_x emission from flue gases in Taiwan

| | M_{total} (tonne/a) | M_{EF} (tonne/a) | M_{testing} (tonne/a) | M_{CEMS} (tonne/a) |
|------|---|--|---|-----------------------------------|
| 2007 | 186,669.6 | 14,626.08 | 35135.6 | 136878.61 |
| 2008 | 177,685.74 | 16,705.23 | 35495.44 | 125474.21 |
| 2009 | 169,783.16 | 15,076.17 | 37264.12 | 117401.72 |
| 2010 | 192,914.16 | 27,294.32 | 40318.32 | 125301.43 |
| 2011 | 200,770.88 | 22,387.36 | 51096.06 | 127286.73 |
| 2015 | 157,110 | 8,112.1 | 33,461.5 | 115,536.6 |
| | M_{EF}/M_{total} (%) | M_{testing}/M_{total} (%) | M_{CEMS}/M_{total} (%) | |
| 2007 | 7.84% | 18.82% | 73.33% | |
| 2008 | 9.40% | 19.98% | 70.62% | |
| 2009 | 8.88% | 21.95% | 69.15% | |
| 2010 | 14.15% | 20.90% | 64.95% | |
| 2011 | 11.15% | 25.45% | 63.40% | |
| 2015 | 5.16% | 21.30% | 73.54% | |

14

Number of NO_x CEMS Stacks: 288 (1.98%), Total number of stacks: 14,505 in 2015
