

Japanese Technology Improvement to Compete in the Global Markets and Imports of Rice

-- Can they make it? --

Presentation 5

Shoichi Ito, Ph.D. 伊東正一

s.ito.250@m.kyushu-u.ac.jp

Kyushu University, Japan九州大学大学院農学研究院,
<http://worldfood.apionet.or.jp>

August 21, 2017

- Today's Key Points -

- Japan's rice imports: MA (Minimum Access imports)
- Current Production Costs
- Coping with the high costs by technology
- Japanese rice exports
- Perspectives for the future

Noguchi, N. (2017)
http://costep.open-ed.hokudai.ac.jp/like_hokudai/modules/xelfinder/index.php/view/6968/Associating.jpg

障害物の検知と自動停止
Obstacle detection and automatic stopping

A new technology: by Kubota:

<https://www.youtube.com/watch?v=hHShTeDg4Ko>

Robot Tractor

A new technology: Fertilizer/herbicide flown with irrigation water

A new technology: Smart Water Controller

Saturated water management technology •••

Water-cost saving and greater yield!!!

Conventional

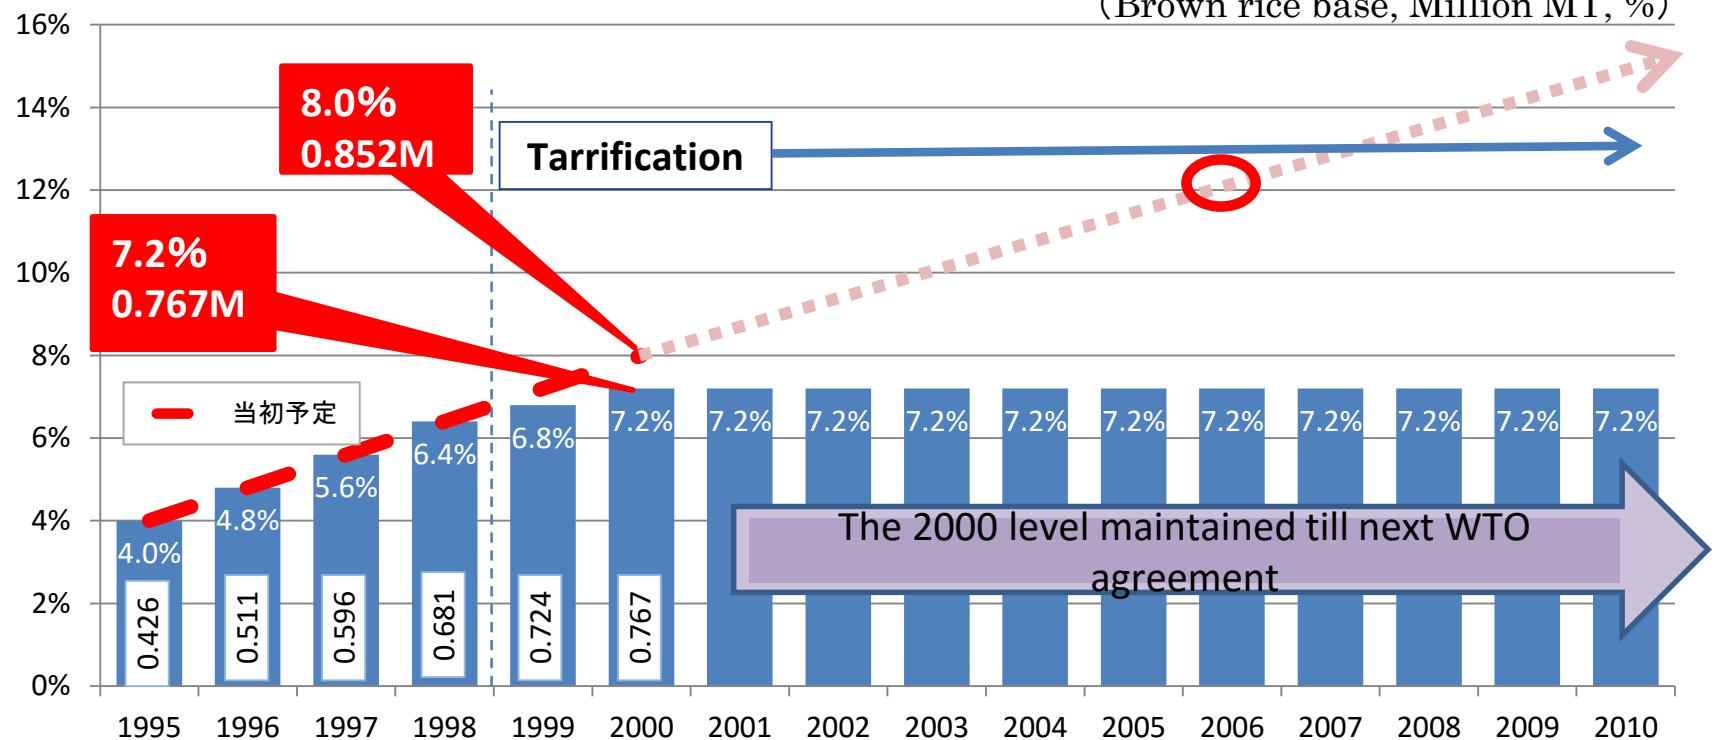

Saturated water management

After the heading, some 25 days of the saturated water management should increase yields by 6% without additional costs and better quality improved by 7 points (Matsue, et. al., 2017).

Rice imports in Japan ...
Politically “eliminated” !!!

Fig. 2-1. MA Rice imports to Japan (1995-Current)

(Brown rice base, Million MT, %)

Source: MAFF "Information and data for rice" 2010

※Due to shift to tariffication, volume of MA rice reduced from the original 0.852 MMT to 0.767 MMT in 2000 and after.

※The base for the percentages is the average consumption during 1986-88.

Minimum Access (MA) rice

Tariffication, 1999 (with 351 yen/kg of tariff)

Tariff reduced to 341 yen/kg since 2000

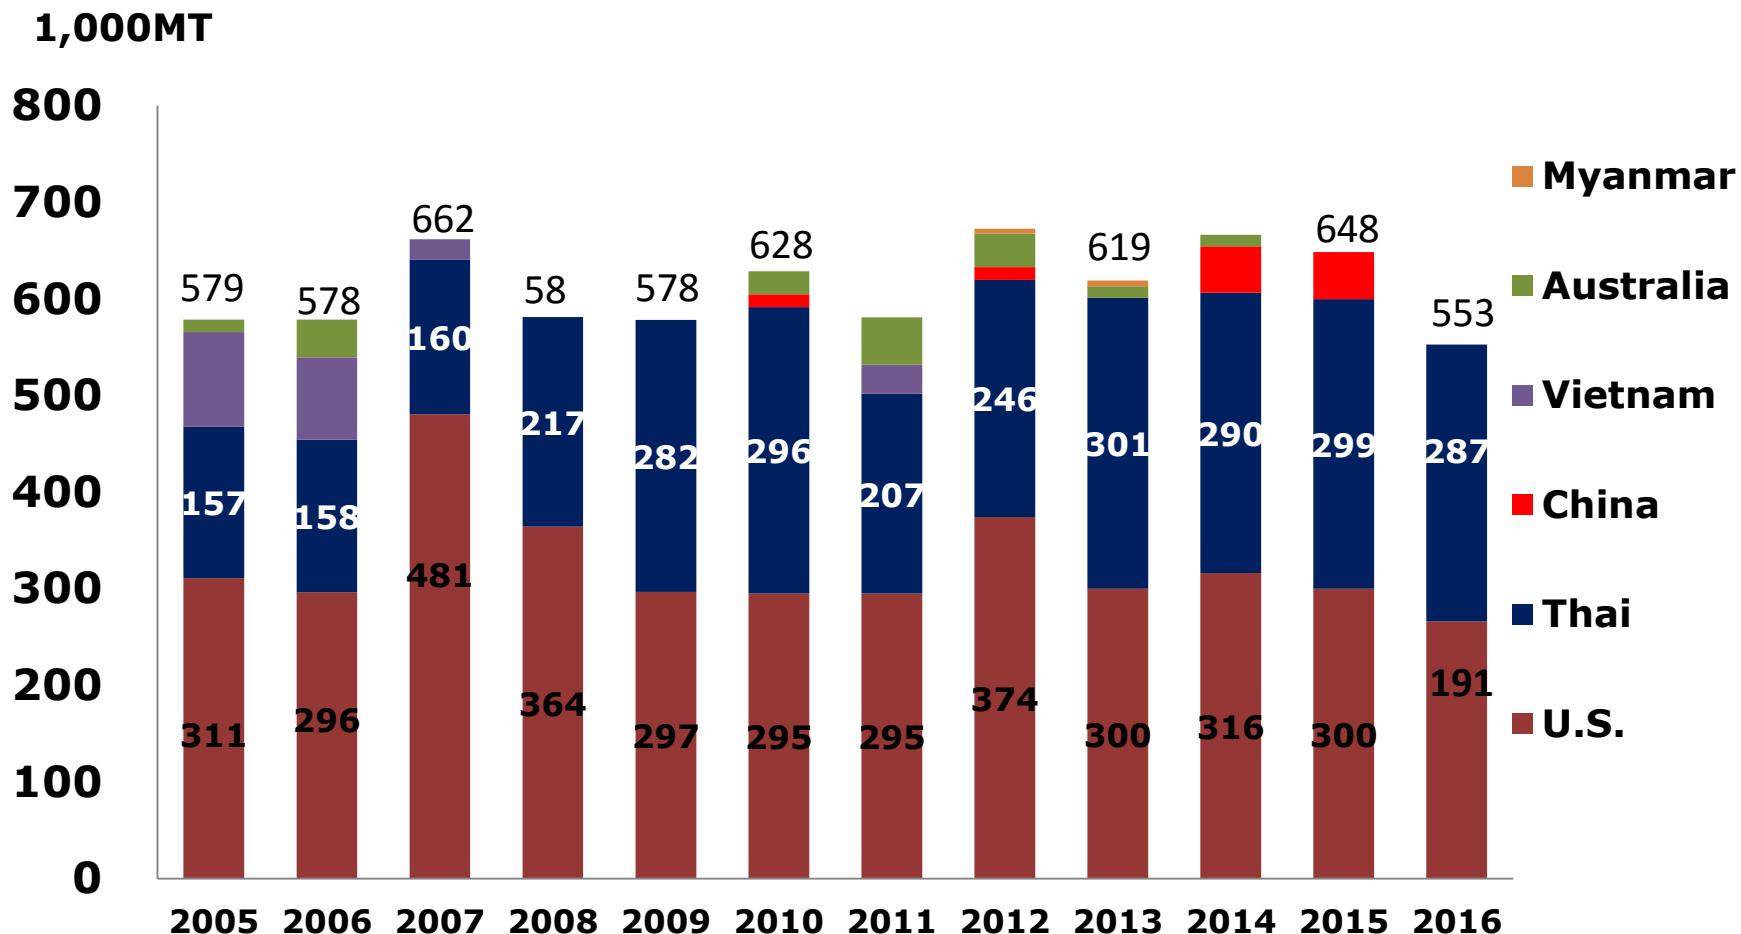

Government-controlled trade

US's share nearly half each year

Rice imports in Japan ...

- Since 1995 at Uruguay Rnd.
- Currently 767,000 tons (brwn)
- MA (minimum access rice)
 - MAG rice (MA rice general)
 - For 667,000 tons
 - SBS rice (simultaneous-buy-and-sell rice)
 - For 100,000 tons
- Outside MA, ¥341 /kg (US\$3,000 /ton) of specific tariff: a prohibitive tariff.

Impacts of weak Japanese yen

¥80/USD in 2011/12, ¥120/USD now...

- **from Outside Japan (from USD...)**
 - Used to pay \$1.00 for 80 yen product,
 - Now, get 40 yen back for your change
 - so, Japanese products cheaper by 33%
- **from Inside Japan (from JP¥...)**
 - Used to pay 80 yen for a \$1.00 product,
 - Now, have to pay 120 yen for the same prod.
 - So, 50% more expensive!!

Japanese rice exports are growing,...

However, it's only...

0.1% !

of domestic production.

It's long way to go.....

**Now, rice is more expensive
in the U.S. than Japan ...**

- **Prices Japonica rice (Japanese varieties) in the US:**
 - Ranged from \$25-\$35 / 15 lbs. (6.8kg)
 - Namely **\$37-\$51 / 10kg**
 - **4,044 yen - 5,662 yen / 10kg (JP¥110/US\$)**
 - In Japan, **2,500 yen - 3,500 yen / 10kg**

Table 8. Retail prices of rice in Los Angeles, U.S. and Milano, Italy. August 2015, milled rice

Japanese restaurants in the world...?

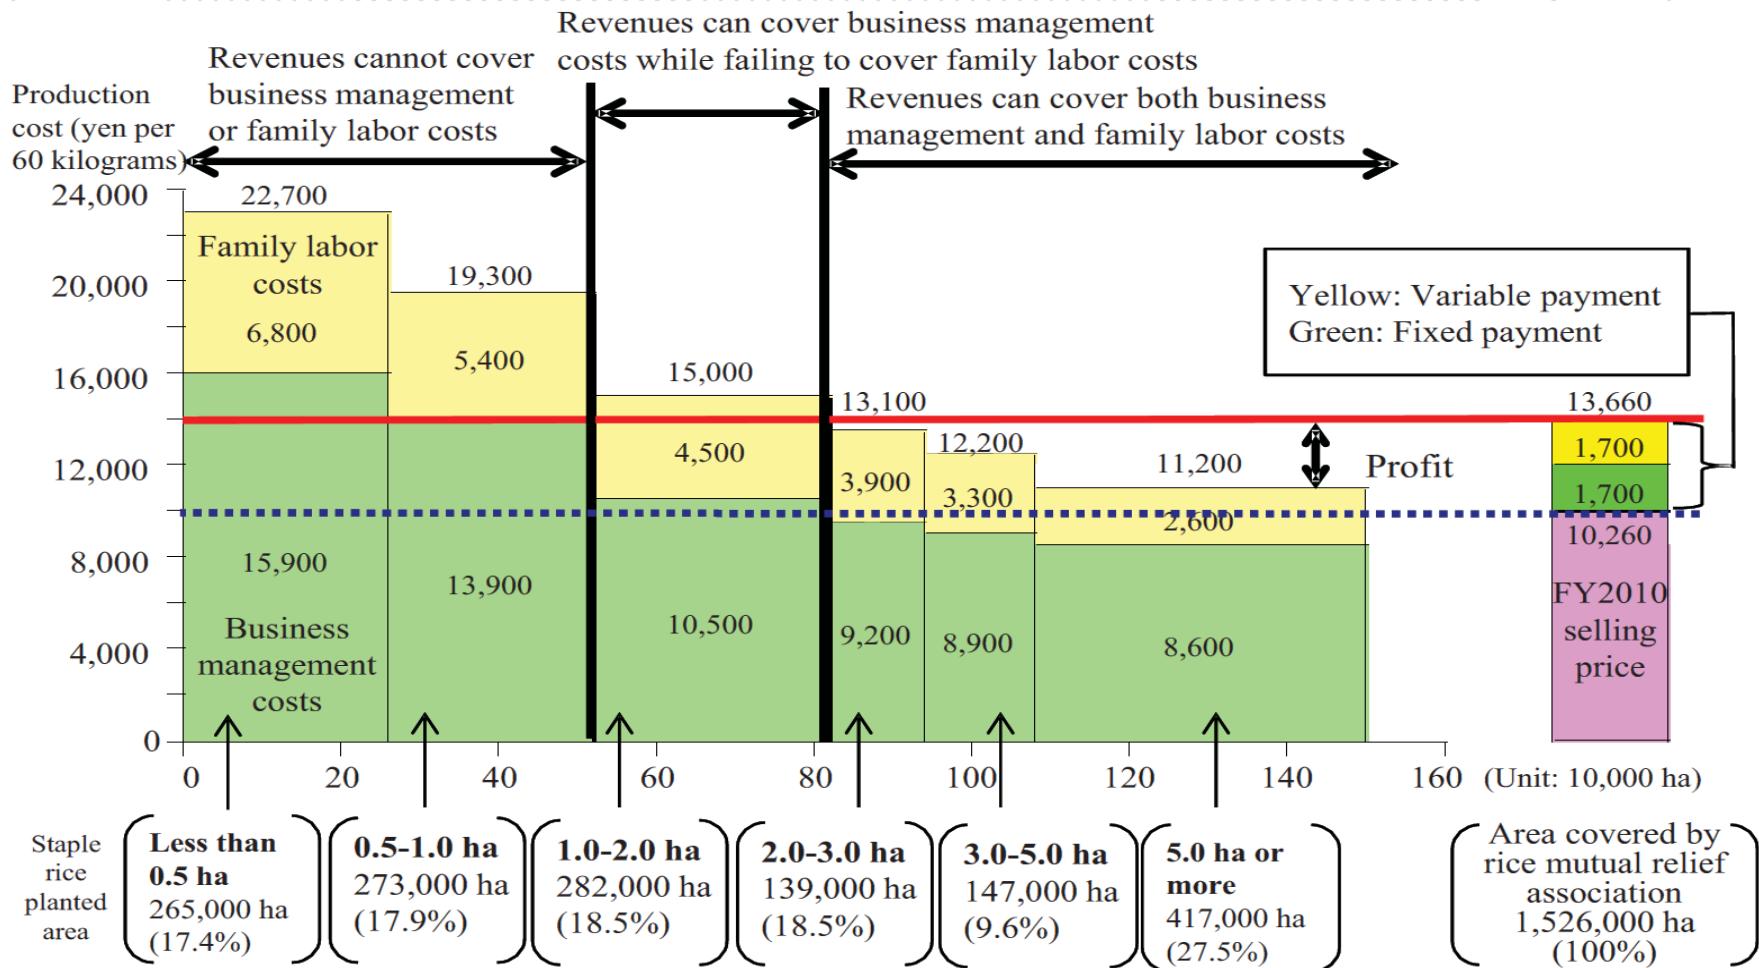

- **Increasing rate of growth in Japanese restaurants,**
- **Still increasing in the U.S.,**
- **The global boom will last next two decades...**
- **and More.....**
- **They are getting cheaper in Japan!!**

*Production costs of rice by size in
Japan ...*

The larger, the cheaper!

④ The implementation of the Income Support Direct Payment Program for Farmers has made some contributions to improving farming business performance, promoting the adjustment of rice supply and expanding production of rice for new uses.

(Rice farmer's business conditions by planted area group)

Structural changes for/in Japanese Agriculture

- **Global booming of Japanese food restaurants**
 - From 30,000 in 2010 to 55,000 in 2013, an 80% increase in 3 years (MAFF)
- **Increases in japonica rice prices**
 - Japonica rice from \$650/MT (milled) in 2013 to \$850 in 2015
 - Indica rice from \$625/MT (milled) in 2013 to \$480 in 2015
 - Much higher prices of japonica over indica rice
- **Depreciation of Japanese yen**
 - From 80 yen a dollar in 2012 to 120 yen in 2015, and 110 yen 2017
 - All Japanese products can be 33% cheaper during 2012 and 2015….
- **Plunge of rice market prices in Japan**
 - Akitakomachi rice from 16,000 yen a 60kg (brown rice) in April 2013 to 11,400 in October 2014 through July 2015, now 14,700 in August 2017
 - In US dollars, from \$3,700/MT (milled) to \$1,760, a 52% decline during 2013 and 2014.
Now, \$2,475, August 2017, up 41% since 2014.
- **Change in policies: Freedom to grow rice in Japan**
 - No compulsory diversion program for rice starting in 2018, with subsidies for other crops

賓之助

Hontouji Bakery

夏祭り

Now, Japanese agriculture ...
Be export oriented!!

**How about technology...?
Being advanced with ICT!!**

3 Innovating production and distribution systems

- Promoting next-generation greenhouse horticulture to utilize woody biomass and other local energy resources and advanced technologies for reducing dependence on fossil fuels, increasing income and creating local jobs at locations where such energy resources are massively accumulated.
- In order to develop agriculture into a growth industry despite population aging, a shortage of new farmers and other difficult problems facing agriculture, Japan should promote new smart agriculture in which robot and information/communications technologies would be introduced for labor-saving, high-quality production.

Districts for implementation of support projects to accelerate introduction of next-generation greenhouse horticulture

Hokkaido Pref. (Tomakomai city)

① Strawberry ② Woody biomass

Miyagi Pref. (Ishinomaki city)

① Tomato, bell pepper
② Woody biomass, underground water

Toyama Pref. (Toyamacity)

① Tomato, flowers
② Fuel from wastes

Hyogo Pref. (Kasai city)

① Tomato
② Woody biomass

Saitama Pref. (Kuki city)

① Tomato
② Woody biomass

Shizuoka Pref. (Oyamatown)

① Tomato, mini-tomato
② Woody biomass

Kochi Pref. (Shimanto town)

① Tomato ② Woody biomass

Oita Pref. (Kokonoe town)

① Bell pepper ② Spa heat

Miyazaki Pref. (Kunitomi town)

① Green pepper, cucumber
② Woody biomass

Note: ① Crops for cultivation ② Local energy sources

New agricultural initiatives using robot and information/communications technologies

1. Developing autonomous-driving systems for tractors, etc.

Promoting the development of autonomous-driving systems for tractors and other agricultural machines to save farming labor and realize large-scale production.

Promoting a study for demonstrating systems for cooperation between manned and unmanned machines and securing their safety to accelerate the development.

A system for cooperation between unmanned (left) and manned (right) machines

2. ICT used for efficient control of dispersed rice paddies

Nabehachi Nosan, a limited liability company in Yatomi city, Aichi Prefecture, has introduced ICT to efficiently manage dispersed rice paddies with a small number of workers, cutting seedling production costs by 25% and labor costs by 5%.

Computer terminals used in an office to integrally control operations

Measurement of plant growth

Getting status on plant(crop) growth from its leaf color
(chlorophyll)

Conventional measurement : leaf color chart (plate),
chlorophyll meter SPAD-502 by Konica Minolta

Leaf color chart (plate)

Alternative method by UAV possible?

Just like manual measurement with leaf color plate, is it possible to alternate the measuring device to UAV's camera?

Cutting production costs...

**Now 200 yen (\$1.82) per 1kg
(brown rice base)**

**Target: 140 yen (\$1.27) /kg
or less**

Implications to the Japanese agriculture ...

- **Great opportunity for exports:**
 - Strong demand with Japanese restaurant boom.
 - Competitive prices against foreign products.
- **Great opportunity to familiarize international trade:**
 - Chance to develop export strategies,
 - Chance to know the foreign markets,

Implications to the japonica rice producers outside Japan ...

- **Great opportunity for expansion of japonica rice:**
 - Still small markets in the world: Too fast increases in production can cause a plunge in market prices, however.
 - Seek higher quality and lower costs.
- **Grasp the domestic markets in own countries:**
 - Boom of Japanese restaurants are occurring in various countries including own home country.

Challenges for Japanese Agriculture

- **Still expensive for Japanese rice to export**
 - With quality and consistency, further cutting down costs is needed.
- **Rice exports increasing but still only at 0.1% of production in Japan**
 - Just started, a long way to go.
- **Structural changes going on in Japan**
 - Land consolidation, larger scale, firms oriented farming,
 - No more rice diversion program, in 2018,
 - Free to grow rice, possibly more production,
 - Market prices may decline.
- **Global winds for Japanese agriculture**
 - Booming Japanese food, restaurants all over the world,
 - More demand for rice from Japan,
- **Technology, ICT, in Japan**
 - Cutting production costs possible. Easier access to exports,
 - Institutional better team work for rice exports,

A photograph of a vast, vibrant green rice field stretching to a distant horizon under a clear, pale blue sky. The rice plants are tall and dense, with many small, light-colored rice grains visible at the tips of the stalks.

Let's eat more rice!!

Thank you for your attention!
