

Air quality monitoring and weather forecast to reduce impacts on communities

Alex Mateo
Senior Key Account Manager Envirosuite

Agenda

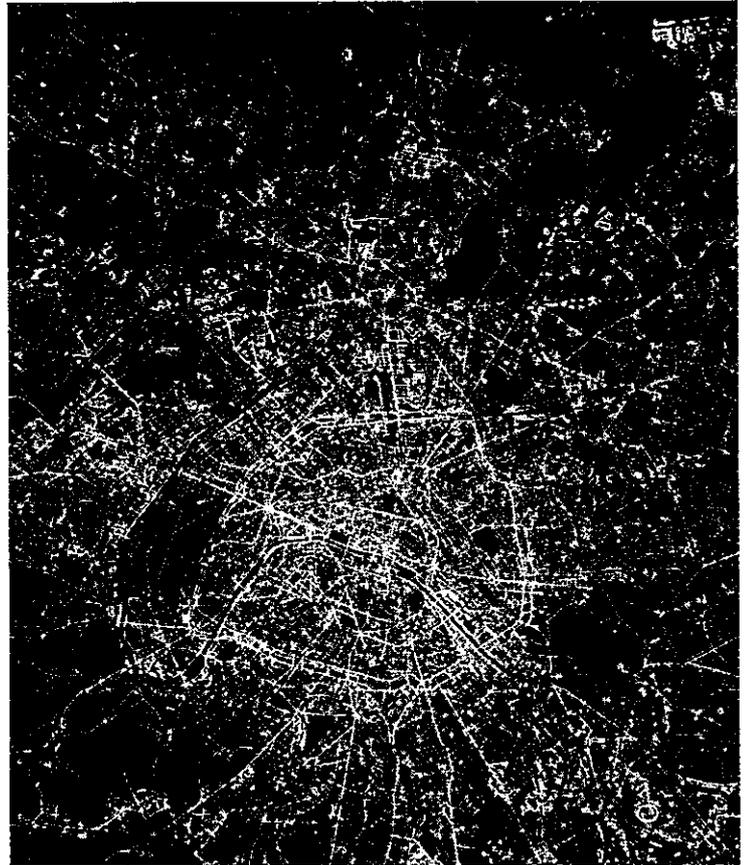

- Who we are.
- Lagares case study.
- IoT solutions for air quality:
 - Real-time monitoring.
 - Impact forecasting.
 - Past incidents investigation.
- Demo.
- Questions and answers.

The world gets smaller and better connected every year. As population grows, industries and communities increasingly collide.

This means regulations are only getting tighter, risks higher, and scrutiny more public. Now, thanks to social media, reputations built over years are destroyed overnight.

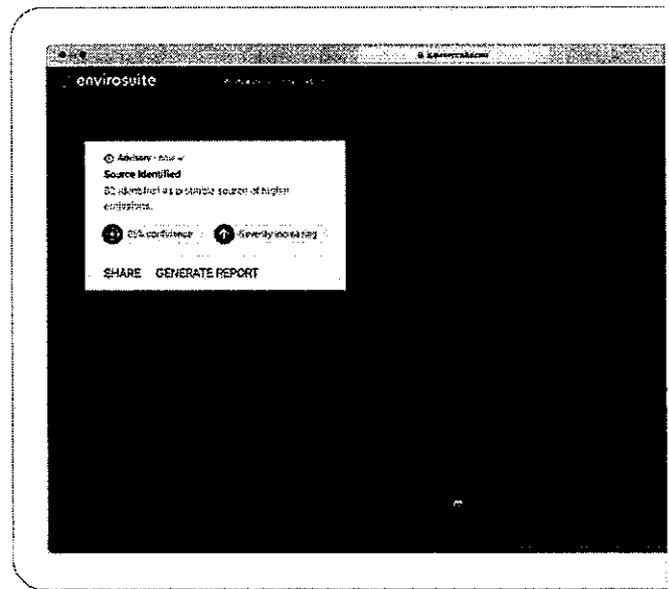

It means getting to the source of environmental issues fast is no longer a "nice to have" – it's a must. Not knowing is no longer good enough.

That's why we've built Envirosuite, the most intelligent real-time environmental management system.

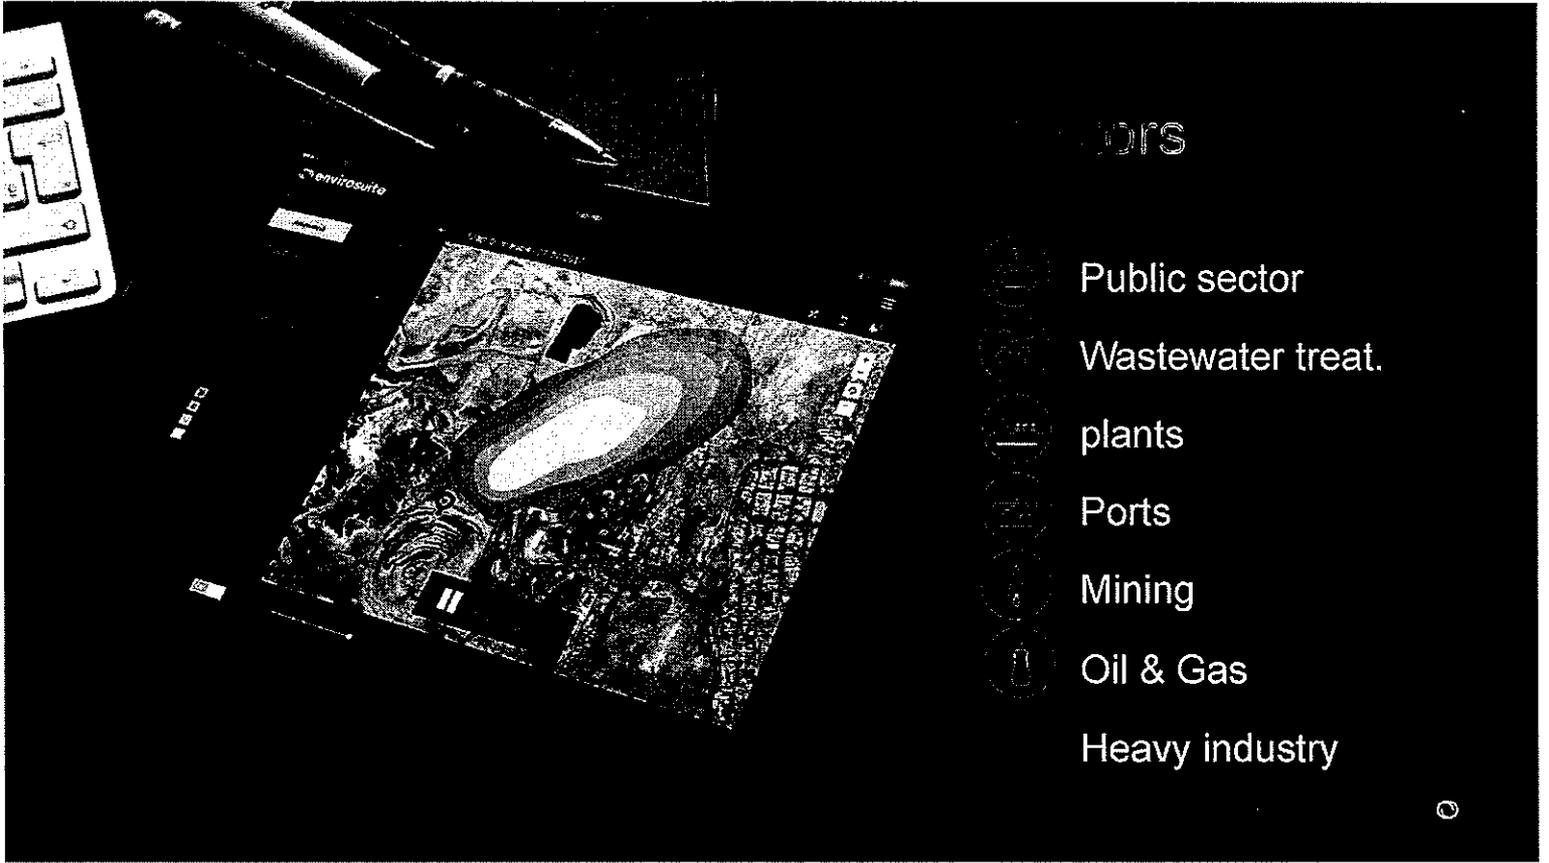

Envirosuite: who we are

- Developed by Pacific Environment, environmental consultants.
- Providing technological solutions *ad hoc* since late 90s.
- First clients with scalable product in 2010.
- Offices in Australia, Canada, US, Colombia, Chile, UK and Spain.
- Listed on ASX stock exchange.

Some of our customers

Industries

- Public sector
- Wastewater treat. plants
- Ports
- Mining
- Oil & Gas
- Heavy industry

envirosuite provides

A cloud-based software platform that for real-time environmental impacts monitoring, forecasting and investigation.

It allows:

- Quick problem identification.
- Quick response to complaints (or avoid them).
- Risks forecasting that allows operational changes.
- Automatic reporting to comply with environmental legislation.

envirosuite provides EIA/TP: initial assessment

social rejection

Neighborhood suffering bad smell problems during 15 years...

New plant solution: powerful odour treatment facilities + odour management tool

envirosuite

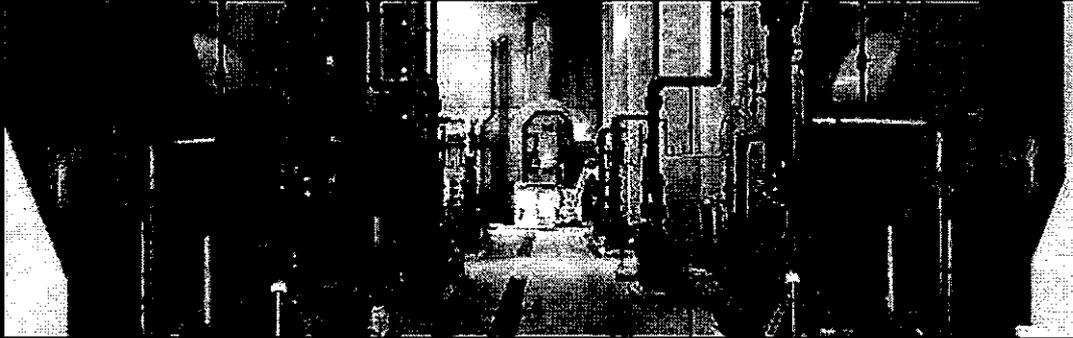

Technical specifications

Technical specifications for the odour treatment facilities and management tool, including details on capacity, efficiency, and operational parameters.

Parameter	Value
Capacity (m³/d)	100,000
Efficiency (%)	95
Operating hours (h/d)	24
Power consumption (kW)	150
Footprint (m²)	5,000
Height (m)	10
Material	Stainless Steel
Warranty (years)	5
Manufacturer	Envirosuite

Final specifications (II)

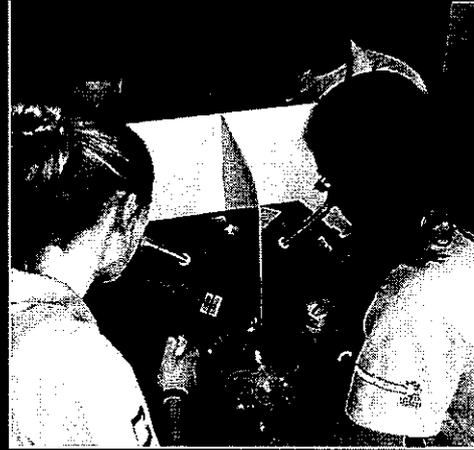

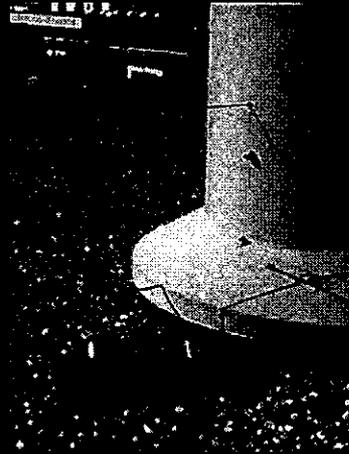

Project goal

- Create a 3D model of the building
- Create a 3D model of the interior
- Create a 3D model of the exterior
- Create a 3D model of the site
- Create a 3D model of the landscape
- Create a 3D model of the terrain
- Create a 3D model of the vegetation
- Create a 3D model of the water bodies
- Create a 3D model of the sky
- Create a 3D model of the ground
- Create a 3D model of the buildings
- Create a 3D model of the streets
- Create a 3D model of the parks
- Create a 3D model of the schools
- Create a 3D model of the hospitals
- Create a 3D model of the government buildings
- Create a 3D model of the religious buildings
- Create a 3D model of the cultural buildings
- Create a 3D model of the sports buildings
- Create a 3D model of the entertainment buildings
- Create a 3D model of the commercial buildings
- Create a 3D model of the residential buildings
- Create a 3D model of the industrial buildings
- Create a 3D model of the utility buildings
- Create a 3D model of the transportation buildings
- Create a 3D model of the communication buildings
- Create a 3D model of the energy buildings
- Create a 3D model of the water supply buildings
- Create a 3D model of the waste management buildings
- Create a 3D model of the environmental buildings
- Create a 3D model of the social buildings
- Create a 3D model of the cultural buildings
- Create a 3D model of the educational buildings
- Create a 3D model of the healthcare buildings
- Create a 3D model of the government buildings
- Create a 3D model of the religious buildings
- Create a 3D model of the cultural buildings
- Create a 3D model of the sports buildings
- Create a 3D model of the entertainment buildings
- Create a 3D model of the commercial buildings
- Create a 3D model of the residential buildings
- Create a 3D model of the industrial buildings
- Create a 3D model of the utility buildings
- Create a 3D model of the transportation buildings
- Create a 3D model of the communication buildings
- Create a 3D model of the energy buildings
- Create a 3D model of the water supply buildings
- Create a 3D model of the waste management buildings
- Create a 3D model of the environmental buildings
- Create a 3D model of the social buildings

IDEAL CONDITIONS FOR LIFE

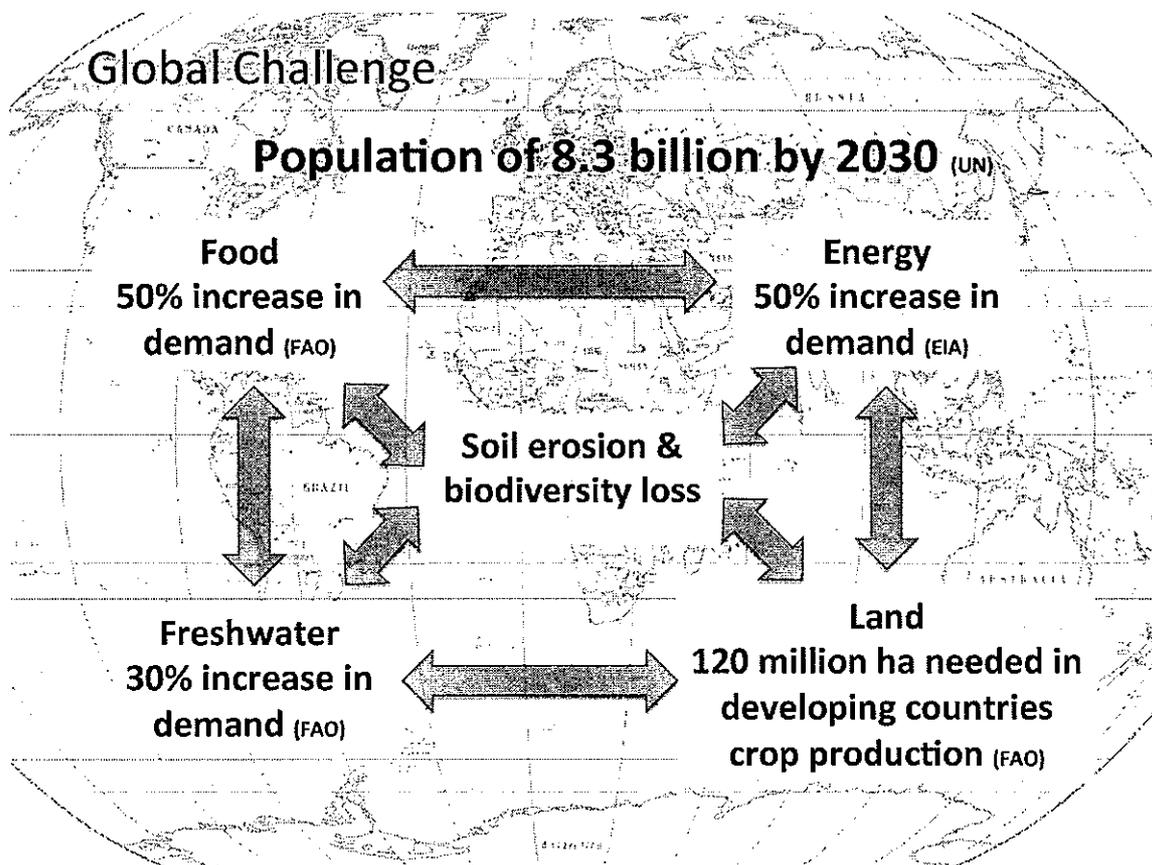

The James
Hutton
Institute

The Role of IOT in Vertical Farming for global food resilience

David Farquhar, CEO, Intelligent Growth Solutions

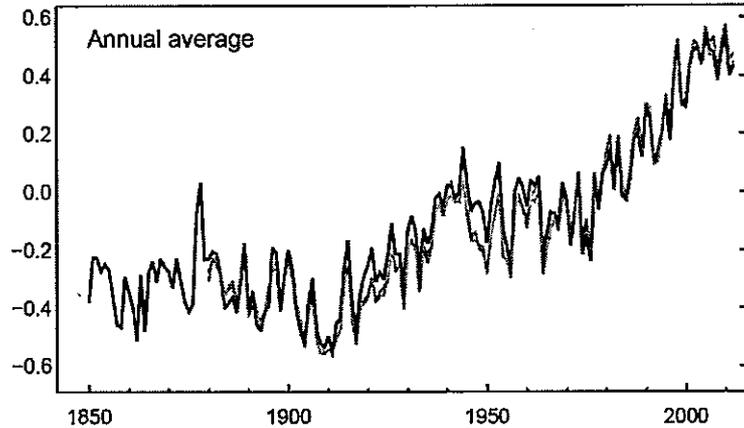

Prof. Derek Stewart, The James Hutton Institute

Humans are changing the climate

It is extremely likely that we are the dominant cause of warming since the mid-20th century

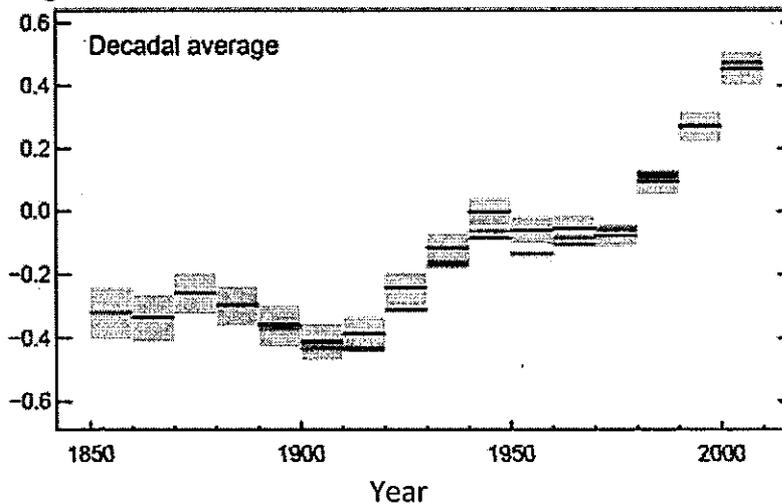

Globally averaged combined land and ocean surface temperatures

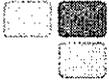

Temperatures continue to rise

Each of the past 3 decades has been successively warmer than the preceding decades since 1850

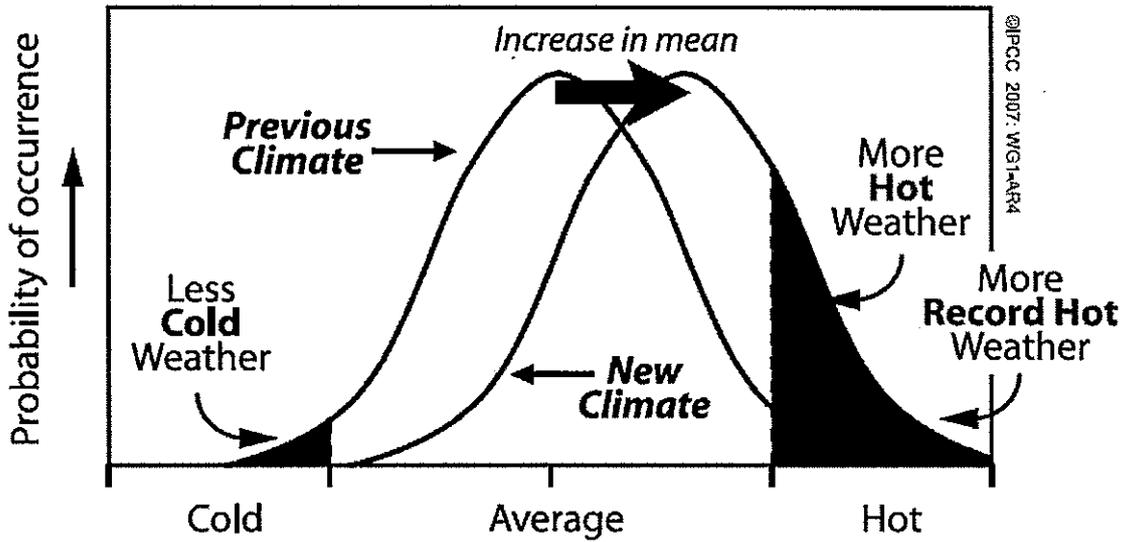

Globally averaged combined land and ocean surface temperatures

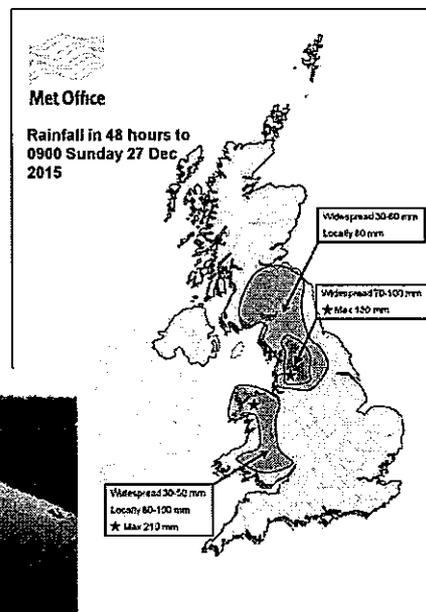

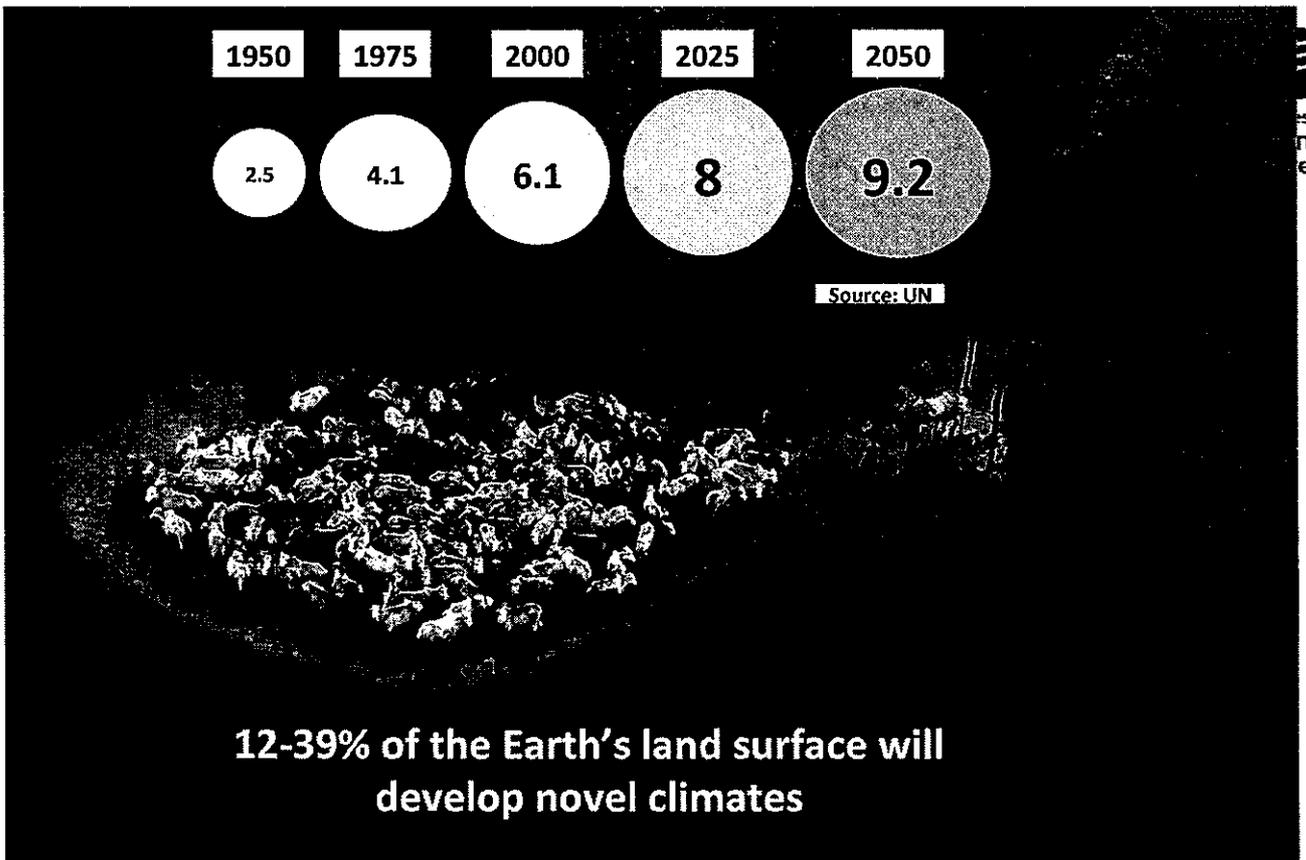

Probability of extreme weather events

Impacts are already underway

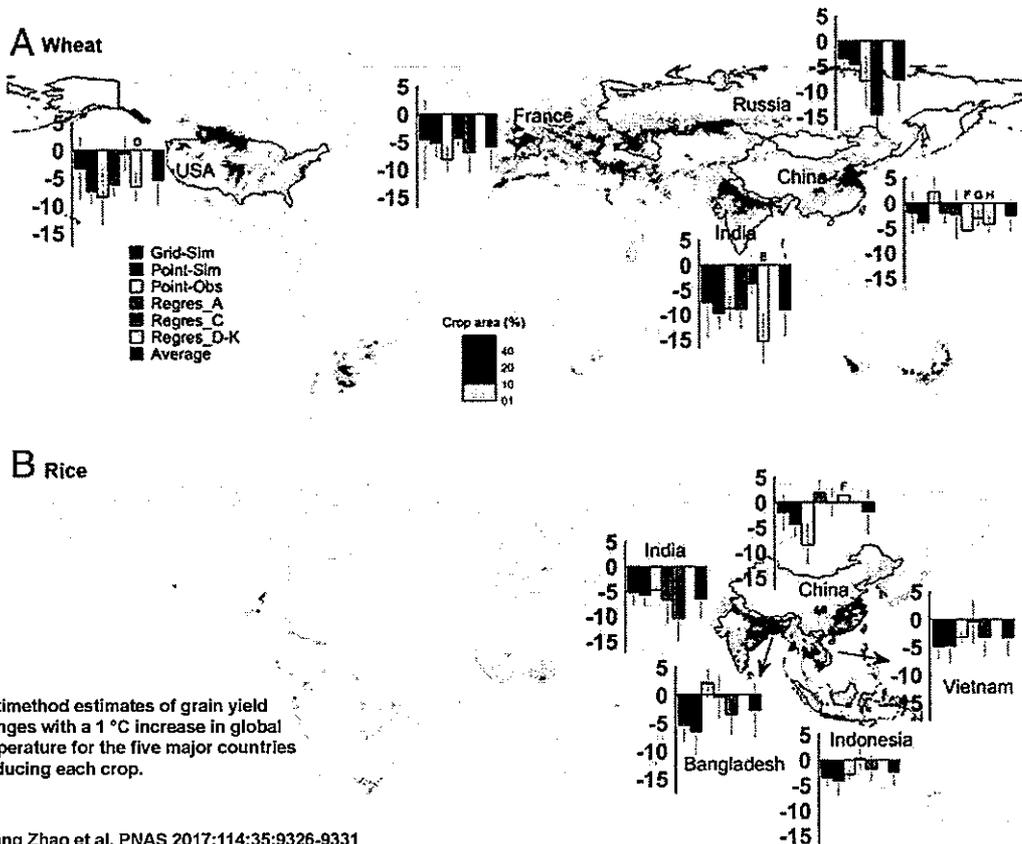

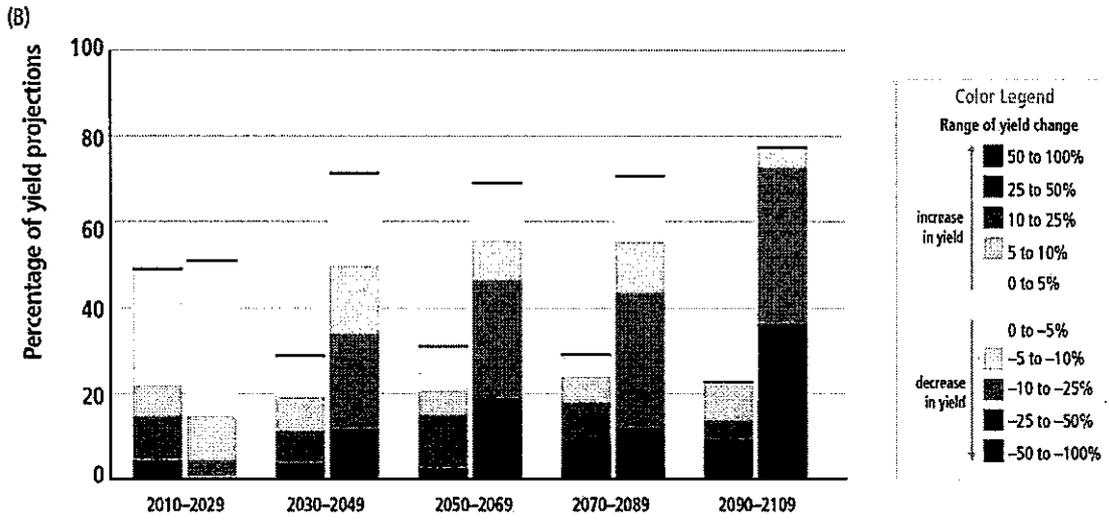

The impacts at the immediate local level were more than apparent in late 2015

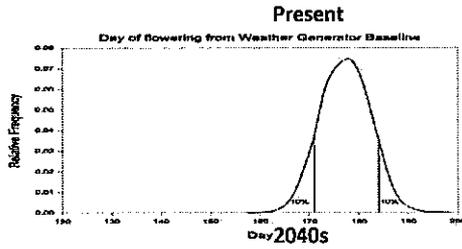

Climate Change Poses Risk for Food Production

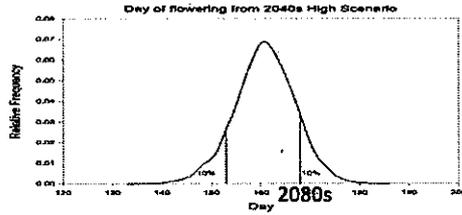

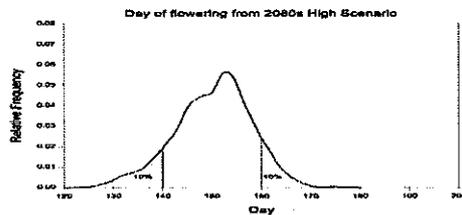

Changes in Barley Flowering Date

c. 27th June

c. 11th June

c. 2nd June

Increasing variability requiring adaptive responses

Climate Change will hit the staple crops and then the consumer

IMPACTS OF CLIMATE CHANGE

By 2030, nine out of 10 of the major crops will experience reduced or stagnant growth rates, while average prices will increase dramatically as a result, at least in part, due to climate change.

Global Food Companies & Climate Change

Global Food Supply – Kellogg's

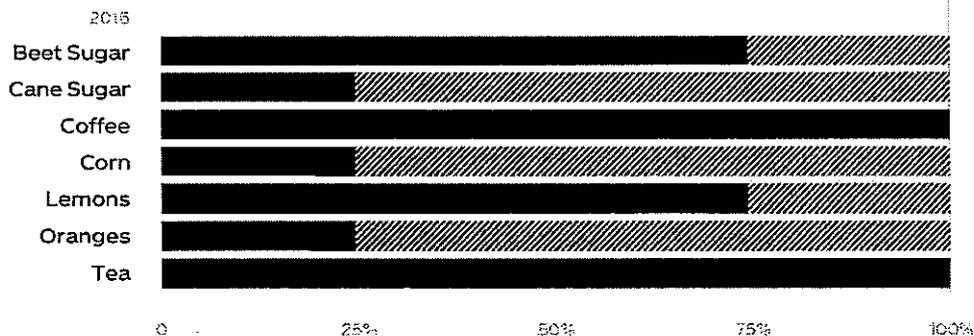

Global Food Supply – Coca Cola

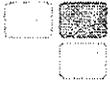

AGRICULTURE

▨ = 2020 Goal (100%)

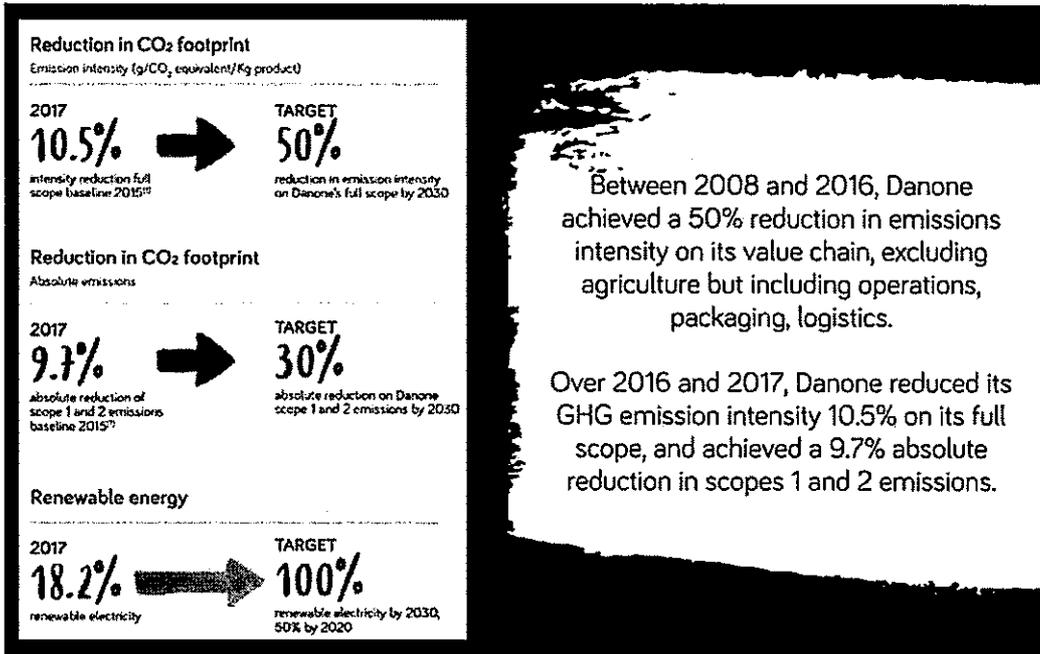

■ = Achieved

Percentage of our key agricultural ingredients sourced from more sustainable sources in 2015

Global Food Supply - Danone

Between 2008 and 2016, Danone achieved a 50% reduction in emissions intensity on its value chain, excluding agriculture but including operations, packaging, logistics.

Over 2016 and 2017, Danone reduced its GHG emission intensity 10.5% on its full scope, and achieved a 9.7% absolute reduction in scopes 1 and 2 emissions.

Global Food Supply - PepsiCo

SCOPE 3 EMISSIONS INCLUDE INDIRECT EMISSIONS THROUGHOUT OUR VALUE CHAIN FROM THINGS LIKE:

- AGRICULTURE
- EMPLOYEE COMMUTING
- MANUFACTURING OF PACKAGING
- BUSINESS TRAVEL
- THIRD-PARTY LOGISTICS AND DISTRIBUTION
- CONSUMER USE OF SOLD PRODUCTS

OUR PROGRESS

7% PROGRESS TOWARDS OUR TARGET REDUCTION AMOUNT, WHICH EQUALS MORE THAN A 2 MILLION METRIC TONNE REDUCTION IN 2017

These results were driven largely by replacing older vending and cooler equipment with higher-efficiency machines and continuing to transition to hydrofluorocarbon (HFC)-free refrigerants.

EUROPE: All company-owned vending/cooler equipment is HFC-free

NORTH AMERICA: Our goal is for all company-owned vending/cooler equipment to be HFC-free by 2020

OUR EFFORTS

OUR PLAN TO REDUCE SCOPE 3 EMISSIONS INCLUDES:

CONTINUING TO IMPROVE vending and cooler efficiencies

INCREASING RECYCLED CONTENT in packaging materials

DEVELOPING alternative packaging materials

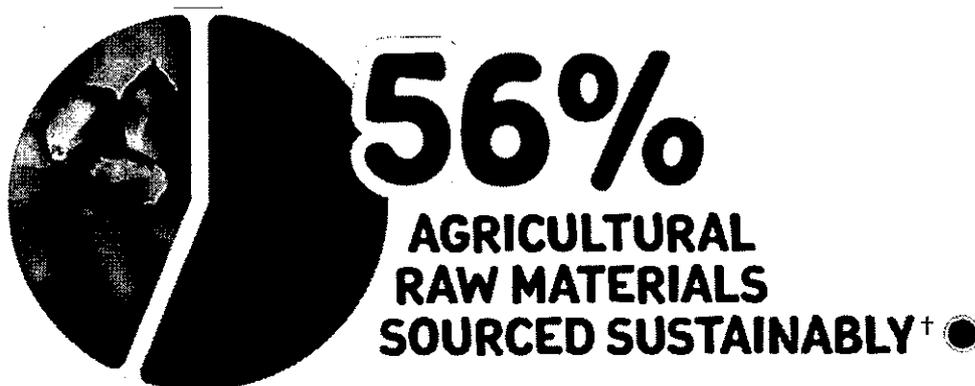

REDUCING GHG EMISSIONS in our agricultural supply chain

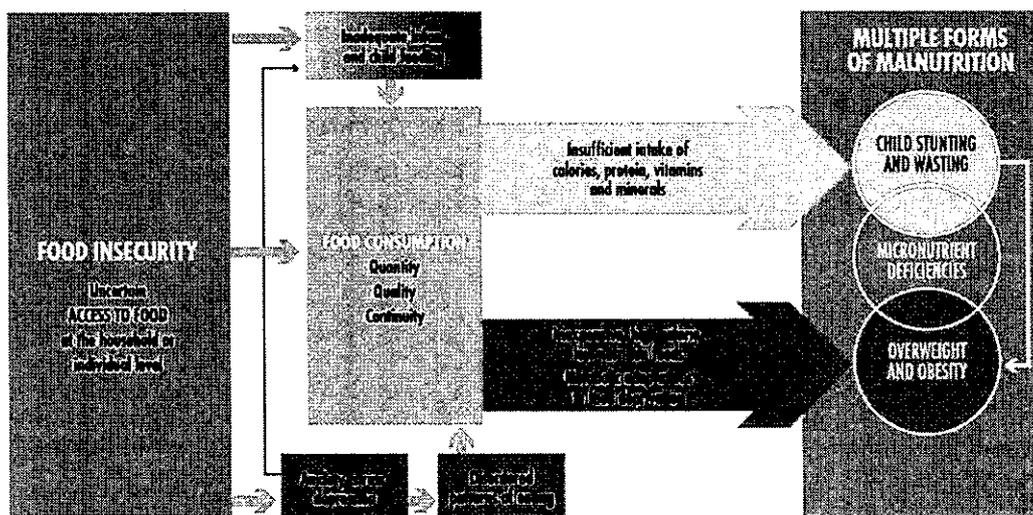

INCORPORATING ENVIRONMENTALLY CONSCIOUS DESIGN into our product development process

Global Food Supply - Unilever

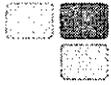

Pathways From Inadequate Food Access To Multiple Forms Of Malnutrition

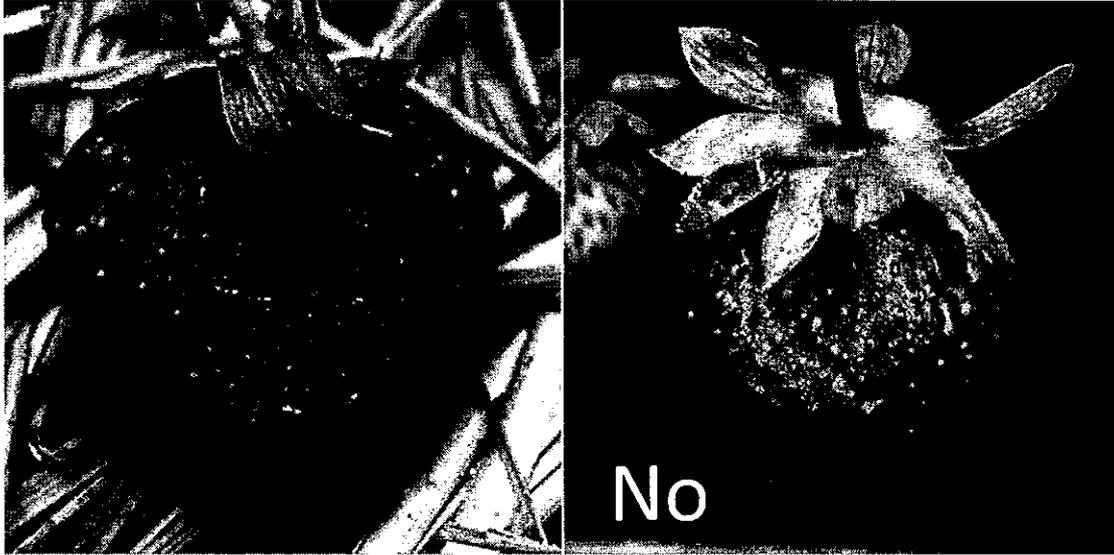

□ Undernutrition pathway ■ Obesogenic pathway

IGS Intelligent
Growth
Solutions

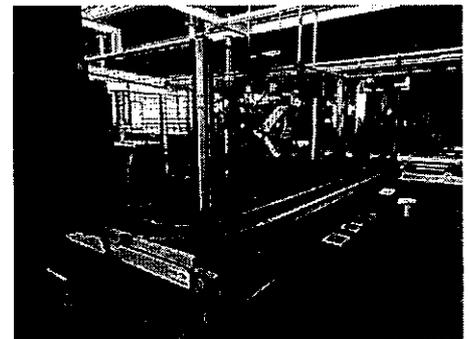

How we use the
Internet Of
Things

STRICTLY CONFIDENTIAL AND PRIVILEGED INFORMATION

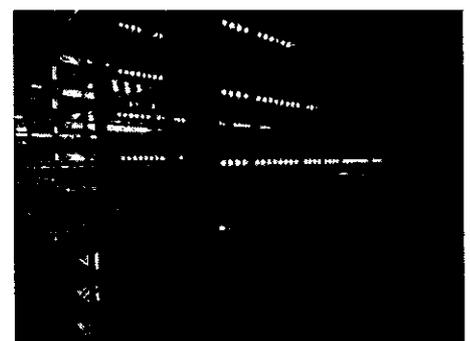

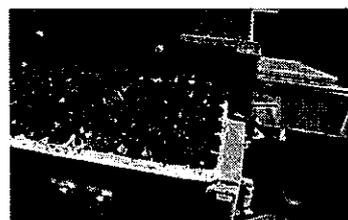

IGS is a 5-year old Agritech innovator designing and selling a revolutionary controlled-environment growth system.

Built on a patented Power & Communications Platform and a patented Growing Platform, 100% Internet of Things (“IOT”) enabled and powered by a 3-tier Artificial Intelligence (“AI”) back-end, IGS’ Totally Controlled Environment Agriculture (“TCEA”) delivers dramatic productivity benefits: 2-3x yield with quality and consistency, using 50% less energy and 80% less labour.

**TODAY GROWING
SOME CROPS IN
SOME PLACES IS
PROFITABLE AT
INDUSTRIAL SCALE**

MOST INDOOR FARMING IS
ECONOMICALLY INEFFICIENT DUE TO
THE HIGH POWER COSTS

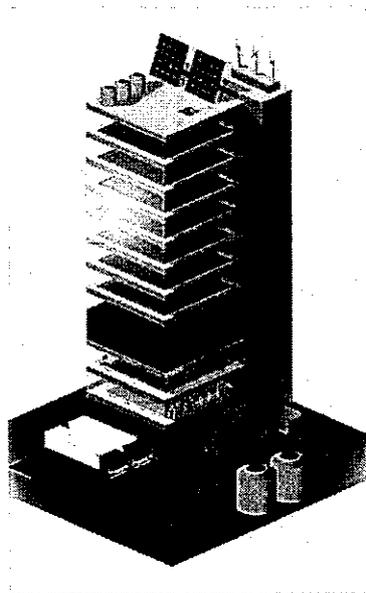

OUTSIDE THE
DEVELOPING WORLD
LABOUR COSTS ARE
PROHIBITIVE

PRODUCTIVITY IS HAMPERED BY THE
INABILITY TO DELIVER TOTALLY
CONTROLLED ENVIRONMENT
AGRICULTURE

25

Vertical farming brings
a whole new set of
challenges.

26

STACKING GROWING SPACE REQUIRES
POWER- HUNGRY AUTOMATION &
MECHANICS

MONOCULTURE OPERATION REQUIRES
TIGHT, BALANCED **ENVIRONMENTAL**
CONTROL

LIGHTING / VENTILATION **OFFSET** DRIVES
POWER COST EVEN HIGHER BY THE
BETWEEN

LOTS OF ATTENTION & INVESTMENT BUT
PROFITABILITY REMAINS ELUSIVE

27

So we've built
revolutionary Power &
Comms and TCEA platforms.

28

**50% LESS
POWER**

We've solved the power problem.
Patented 3-phase Power & Communications platform to collapse energy costs, using IOT to manage Lighting, Ventilation, Gases and Water (TCEA).

+

**80% LESS
LABOUR**

We've solved the labour problem.
Patented Tower Automation platform to manage stacks of growing trays, handled by robots for germination and propagation.

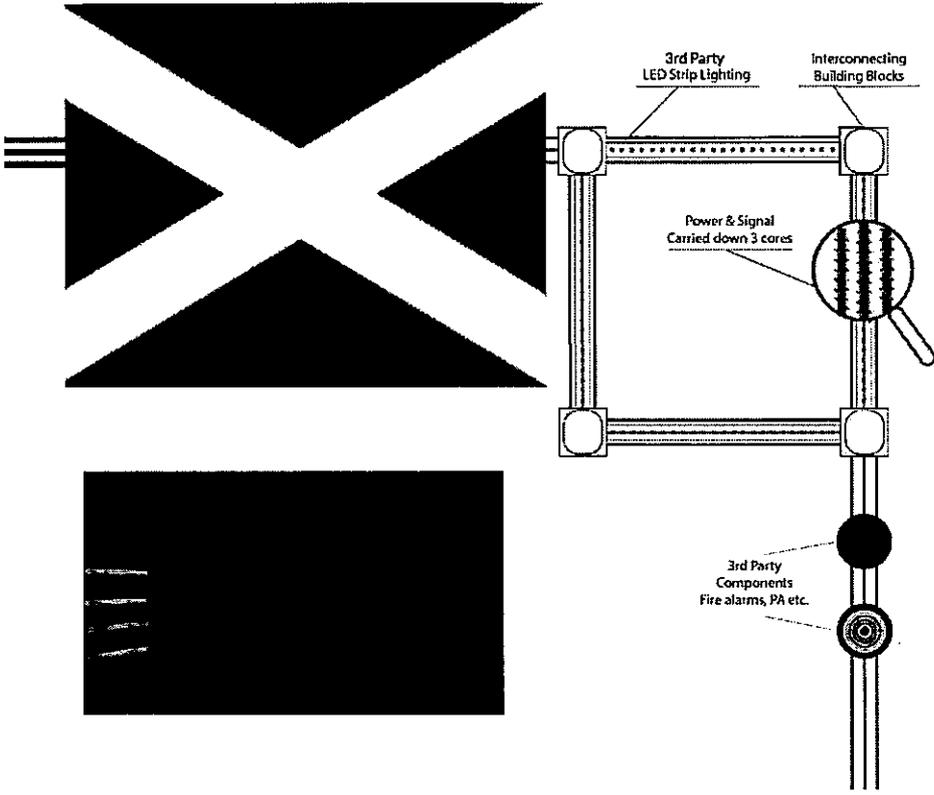

+

**2X-3X
YIELD**

We've solved the productivity problem.
Using Artificial Intelligence our SaaS app lets growers find optimal growing "recipes" using our platforms, including our patented Ventilation System.

Product Strategy

GROWTH TOWER PLATFORM (Vertical farm)	GROWTH STATION PLATFORM (Horizontal farm)	SMART LIGHTING PLATFORM (Agricultural)	SMART LIGHTING PLATFORM (Commercial)
POWER & COMMS PLATFORM			
SOFTWARE & DATA PLATFORM			

Power:
 Works with international 3-phase power variations
 Transformer proven safe & reliable

Distribution:
 Vastly cheaper than copper wiring
 Self-supporting
 Removes cable tray / conduit
 Combined power and data

Communications:
 2-way addressable comms
 Low cost per node
 Full duplex communications possible
 Nodes can be dynamically grouped to respond to commands

Fully IOT-enabled

No Cables. No Computers. No Capacitors.

Radical cost savings: power, installation, maintenance

Supports LED dimming, pulsing and colour-mixing

No loss of efficiency

Power factor ≈ 1 @ dimming range 100%-15%

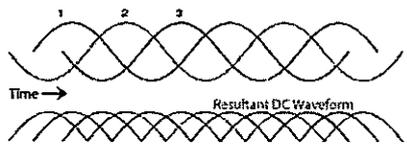

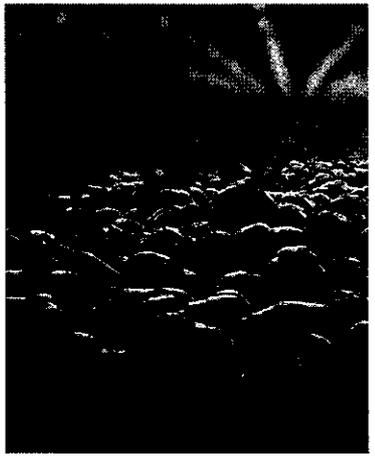

Almost no harmonics: balanced phases

Giving significantly greater productivity: yield, quality, consistency

Communications makes every device addressable / IOT-enabled

Enables remote control of every device

Data capture enables "growth recipe" optimisation

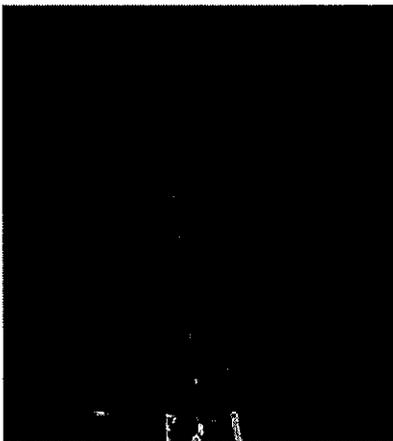

DISRUPTIVE.
 PATENTED.
 PRODUCTIVE.

Powering Totally Controlled Environment Agriculture. For real.

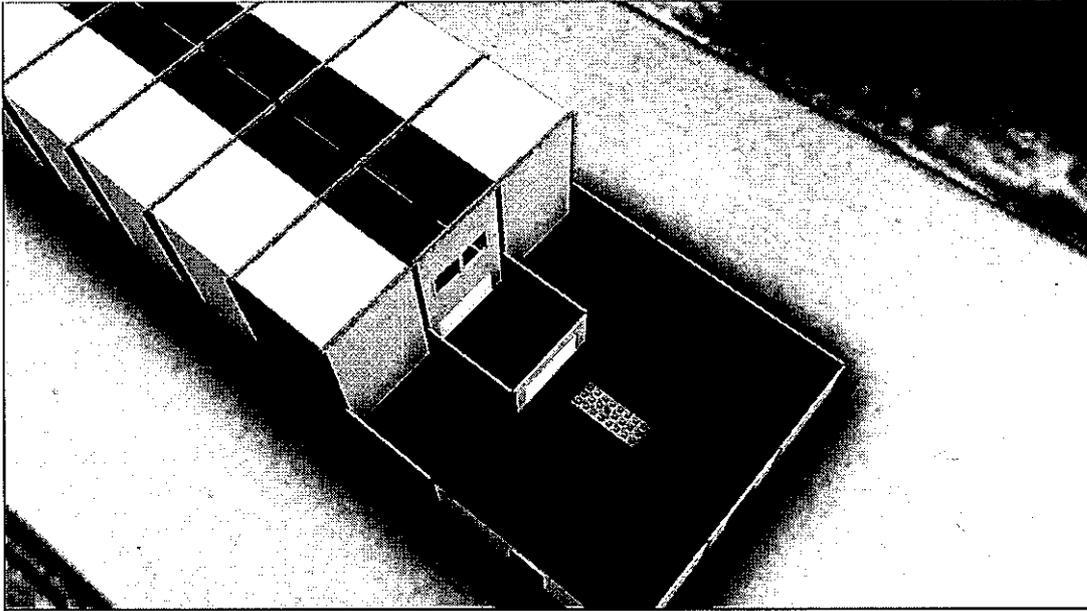

33

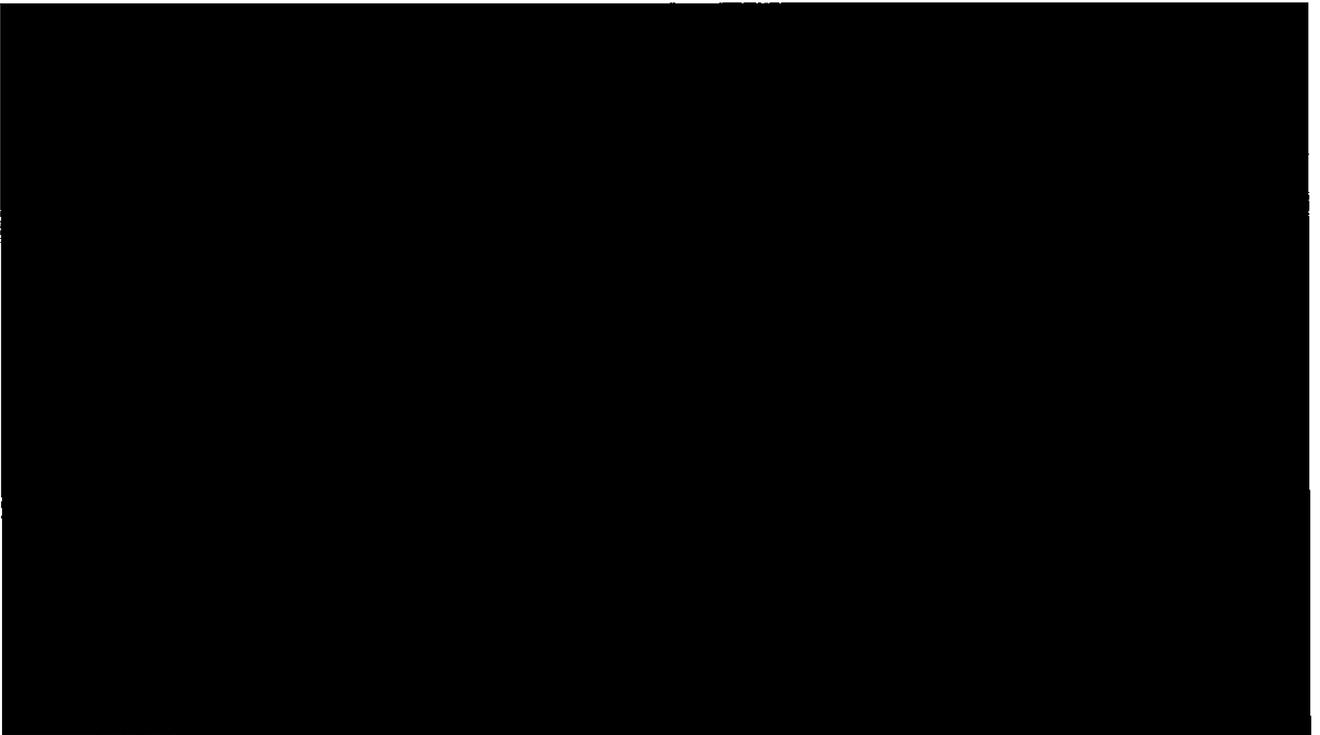

Manages Light, Temperature, Water/Nutrients & Gases
Fully automated Growth Tray systems support all these variables
100% robotic handling
Closed-loop water and air management
In-tray Ventilation delivers $<1^{\circ}\text{C}$ variation across the crop
Artificial Intelligence enables recipe experimentation and optimisation
IOT enables remote monitoring and control of all systems
Controls enabled at farm/tower/tray/LED strip level 24/7/365
Designed to operate anywhere, globally

Concept video

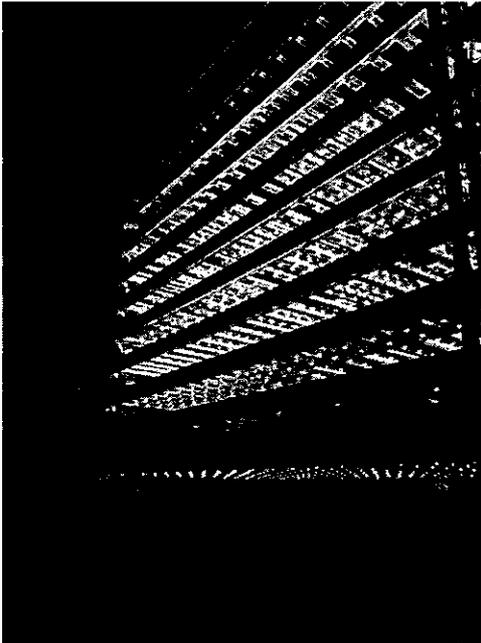

Drone video

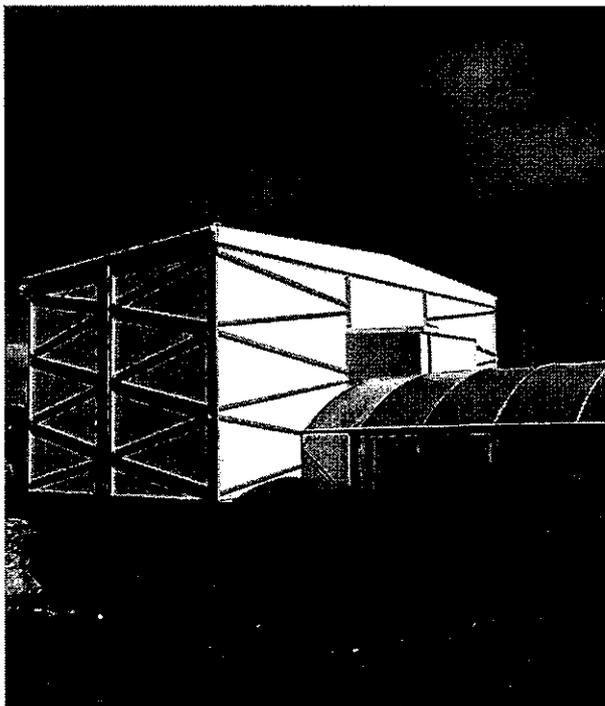

Growth Tower Platform

Power & Comms platform enables real-time control of all tower variables via seamless cloud integration.

- Dynamic lighting utilised on each LED strip
- Flexing the lights per LED strip, per tray, per tower, whole farm
- Full closed-loop watering control
- Full closed-loop air sterilisation and conditioning control
- Humidity harvested, UV filtered and re-used
- CO₂ / O₂ continuously balanced
- Manual or AI-driven recipe creation
- Plants monitored for reaction to recipe changes
- Data capture direct to SaaS platform
- Exception detection and automatic re-set

- Robot Operated
- Picks
- Places
- Waters
- Inspects
- Samples
- Monitors

- Modular Design
- Built in Pairs of Towers
- 60 trays/360m² growing area per tower

Month 1 metrics (basil)
 18-23 days to harvest weight vs 28-35 range for greenhouse
 → 18 growth cycles per annum vs 12: 50% more
 61kg yield per m² vs 40kg industry standard: 50% greater

= 225% yield / m²

@50% Power consumption = 450% yield / watt

Dynamic lighting utilised on each LED strip

Flexing the lights per LED strip, per tray, per station, whole farm

Direct ventilation per tray

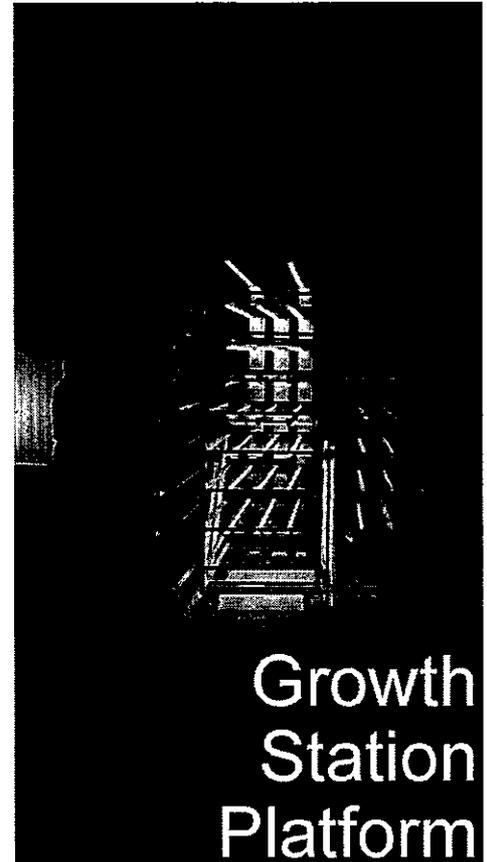

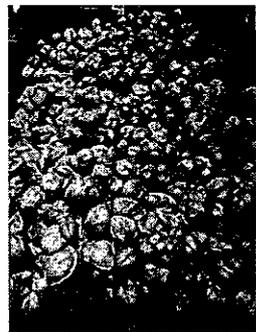

Allows single storey retro-fit

Manual handling

Manual or AI-driven recipe creation

Plants monitored for reaction to recipe changes

Data capture direct to SaaS platform

Smart Lighting Platform

90% less power than conventional lights

No electrician required (33% install cost)

No trunking / cable trays

Modular for different building layouts

Elegant, minimalist design

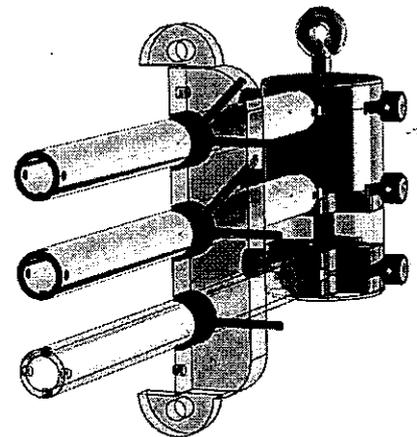

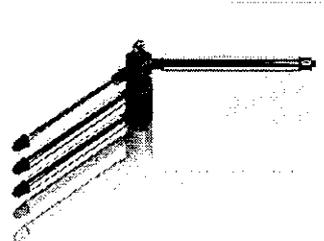

Controllable ambient and accentuated lighting

IOT capability supports Cameras, People Tracking, Sensing

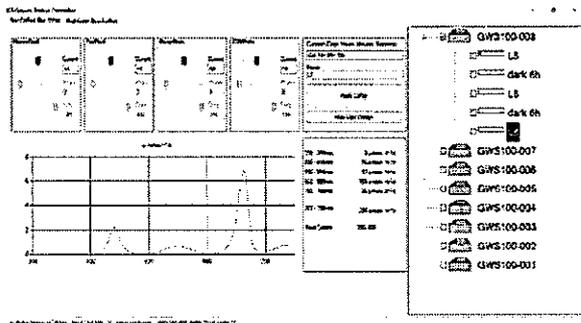

Comms capability enables dynamic shelf edge labelling, etc.

Vastly better quality of light (no flicker)

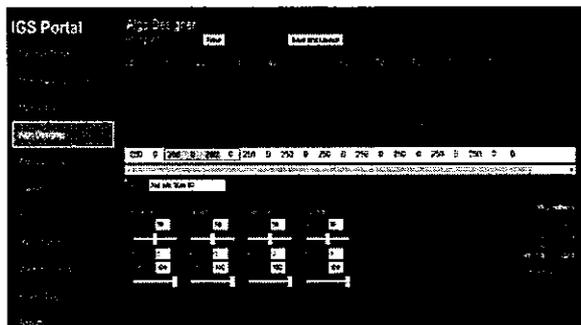

Supplementary greenhouse lighting

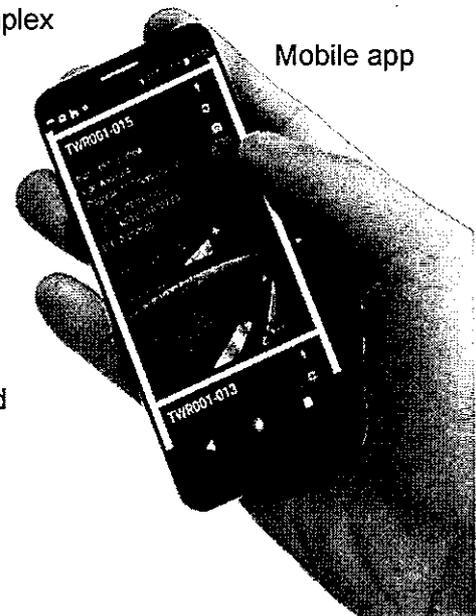

Controlled by our SaaS Software & Data Platform.

Growth Station Controller app:
 Easy to use with little or no training
 Direct control of the lights
 User can build arbitrarily complex sequences of lighting

IGS Portal web interface:
 Richer functionality
 Facility management
 Supports both production and experimentation

Mobile app

The big prize is Data.

43

Machine Learning Platform Road Map

24/7 real-time data from 1,000's of data points, measuring everything from soil moisture to regional power conditions.

IGS leverages a scalable, high performance AI platform architected for large volume spatio-temporal data (IOT, stress sensing, imagery analysis, etc.) to optimize operational efficiency, crop profiles and even supply chain demand management.

Real-Time Operations

- Monitoring data (environmental, lighting, watering, HVAC)
- Operational data (timing of all events, tasks scheduled and actioned)
- Comparing planned events vs actual events vs risk
- Predictive maintenance enabled throughout
- Managing overall lighting, ventilation, irrigation, operational efficiency
- Optimising power consumption and growing conditions
- Flexing with the grid to deliver demand side response*

Growth Recipes

- Dynamic Recipes: all growing attributes can be planned for each crop family and variety
- Recipe Timing: can be run on different trays, at same or staggered timing. A time machine for scientists and market flexibility for production
- Rapid Experimentation correlated to target outputs (taste, growth cycle, shelf-life, etc) by controlling all TCEA inputs
- 100's of experiments per tower
- Optimising growth cycles, nutrient content and specific taste profiles*

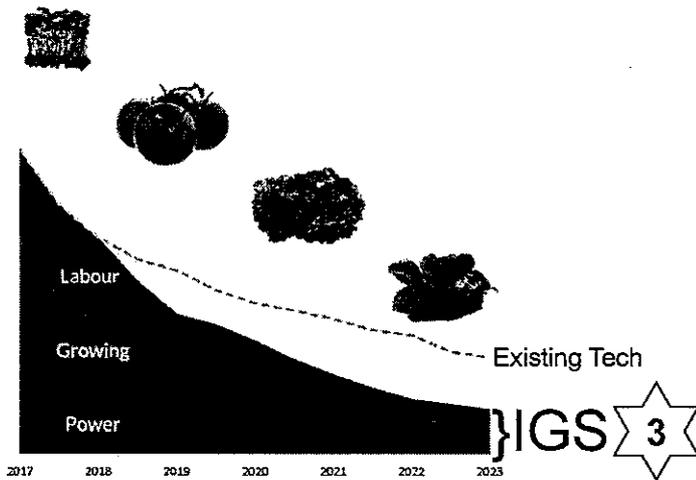

Supply Chain

- Forecast customer demand based on actual historical to predict optimal crop management and planting schedules*
- Leverage across 100s or 1000's of geographically disparate vertical systems and markets*
- Empower large scale growers to flex crop capacities seamlessly*

* work in progress

Making Indoor Ag Profitable

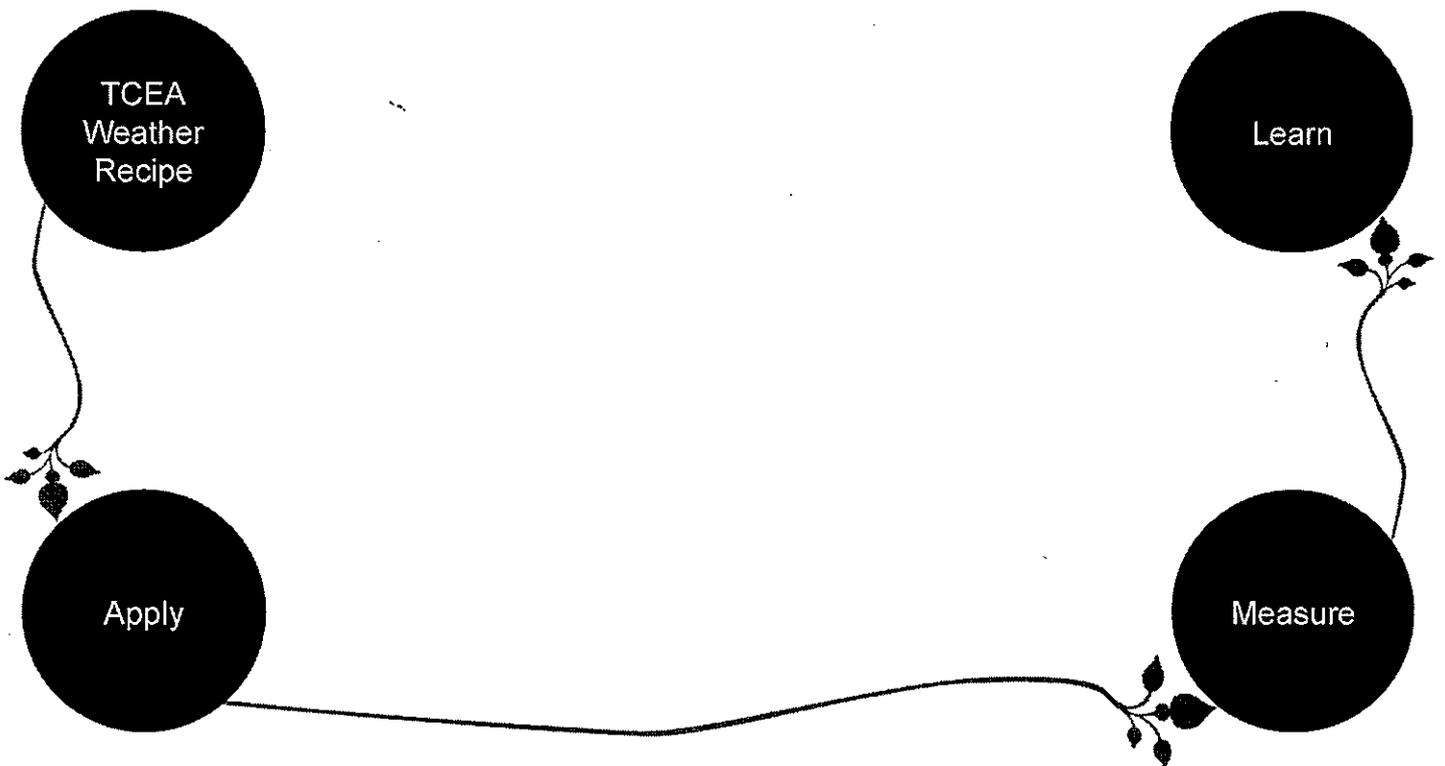

IGS' unique technology drives costs down and yield up, further than any competing system

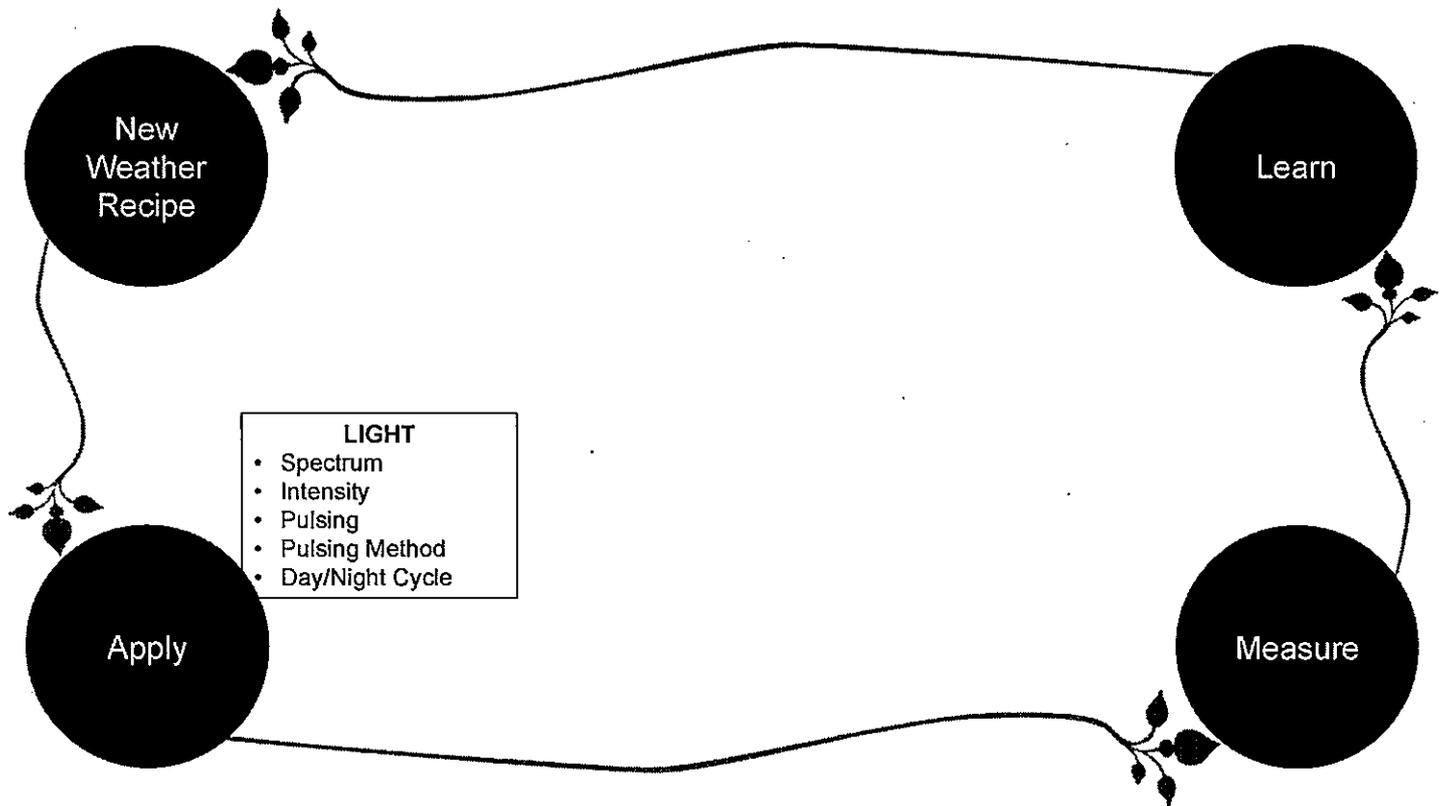

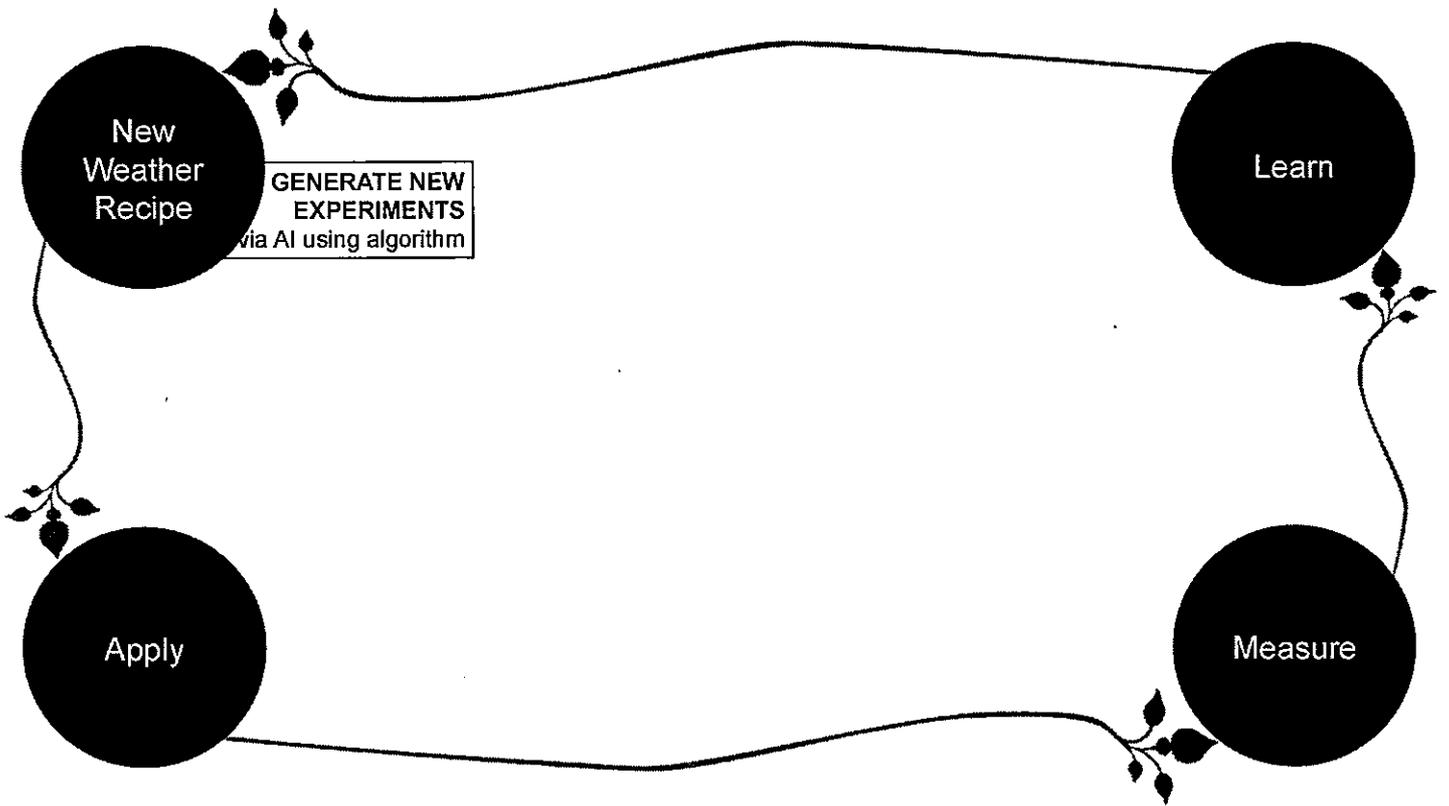

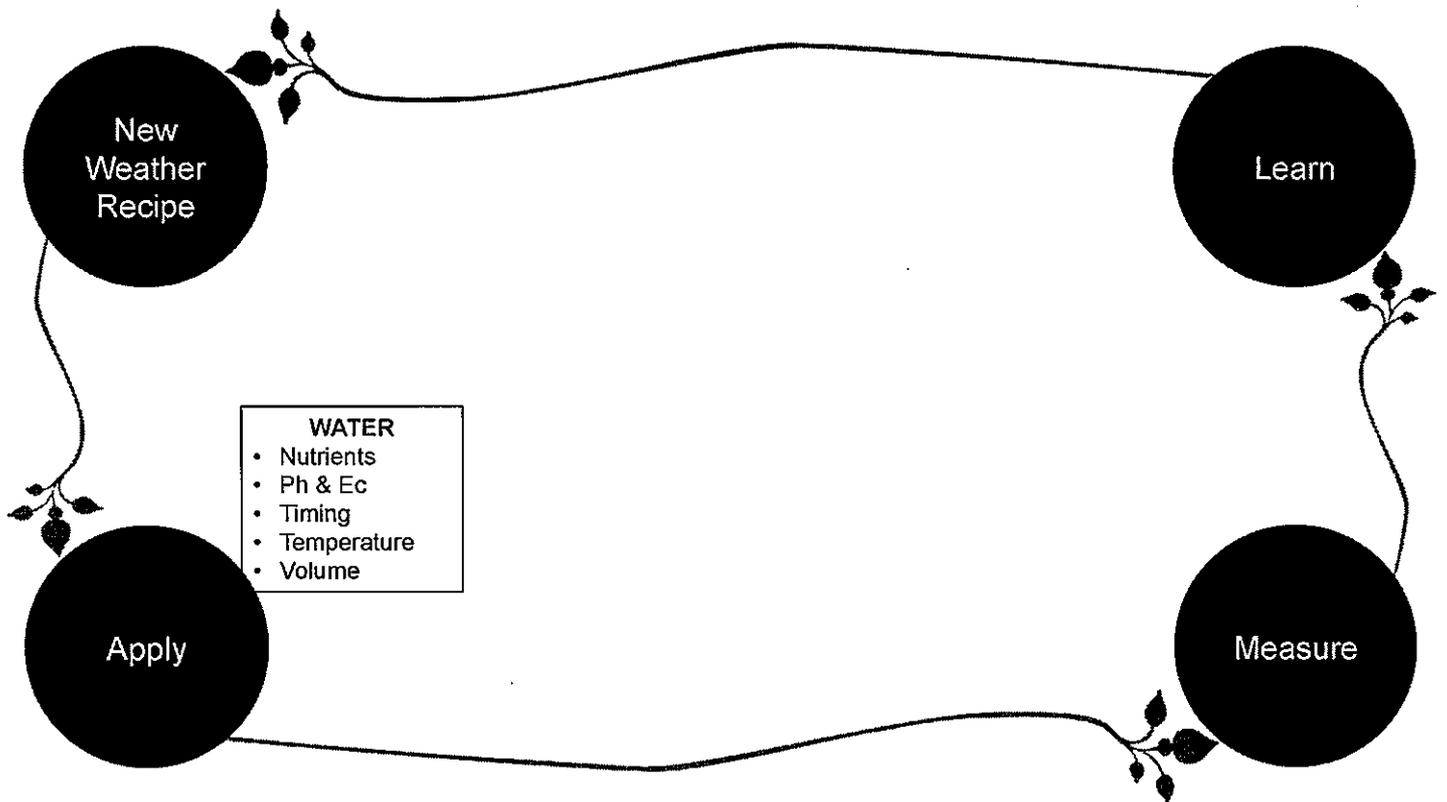

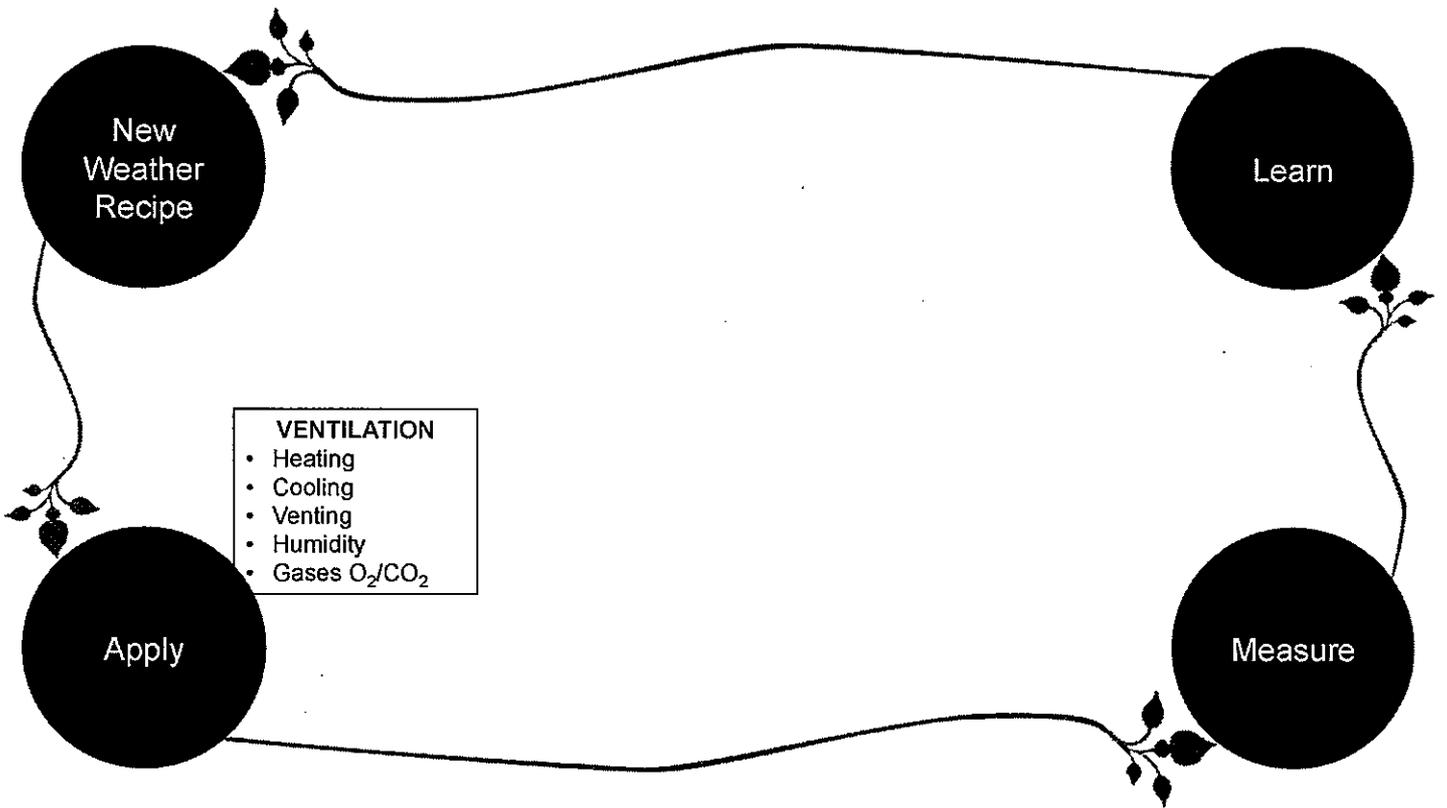

Reduce Power costs with
Photon Optimisation
Smart Power Management

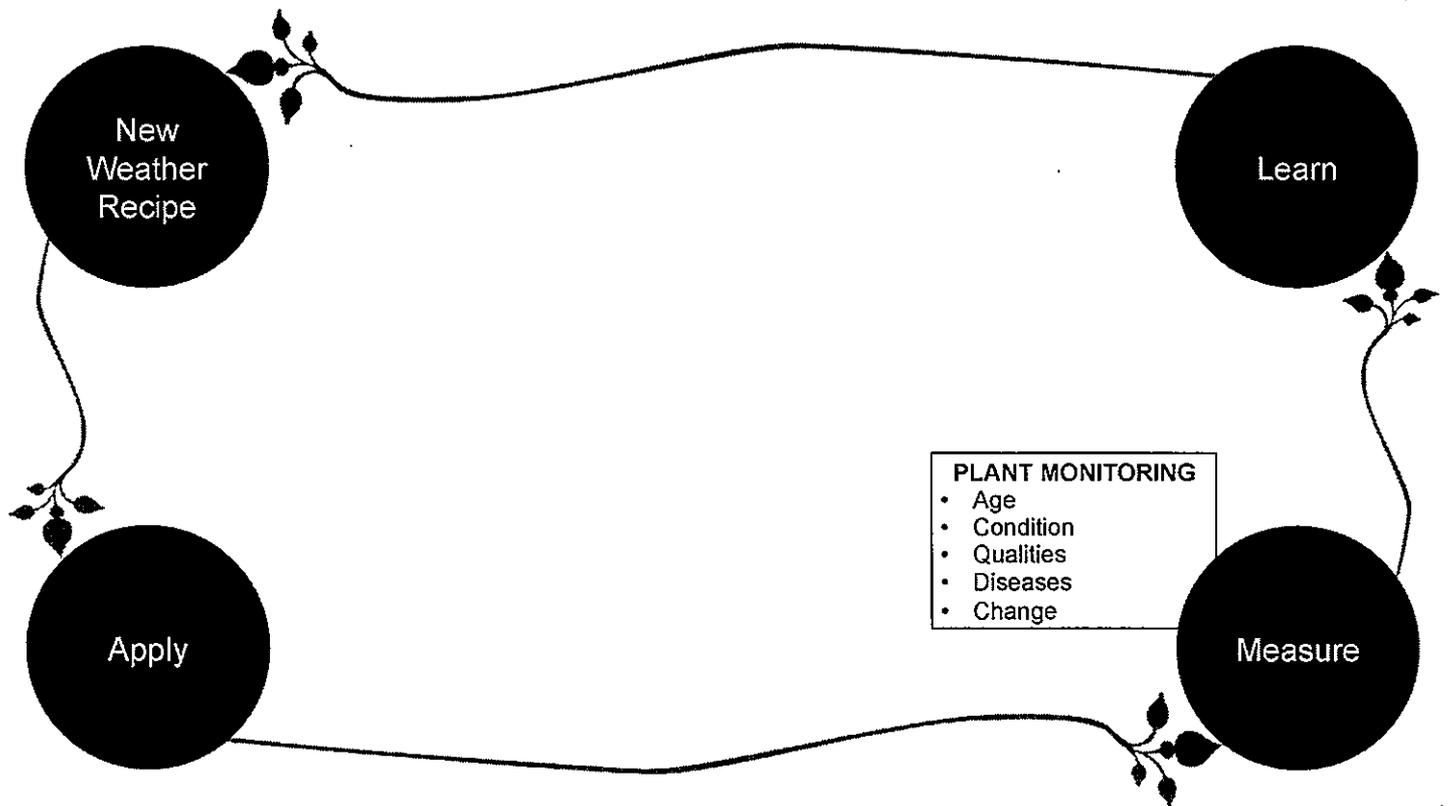

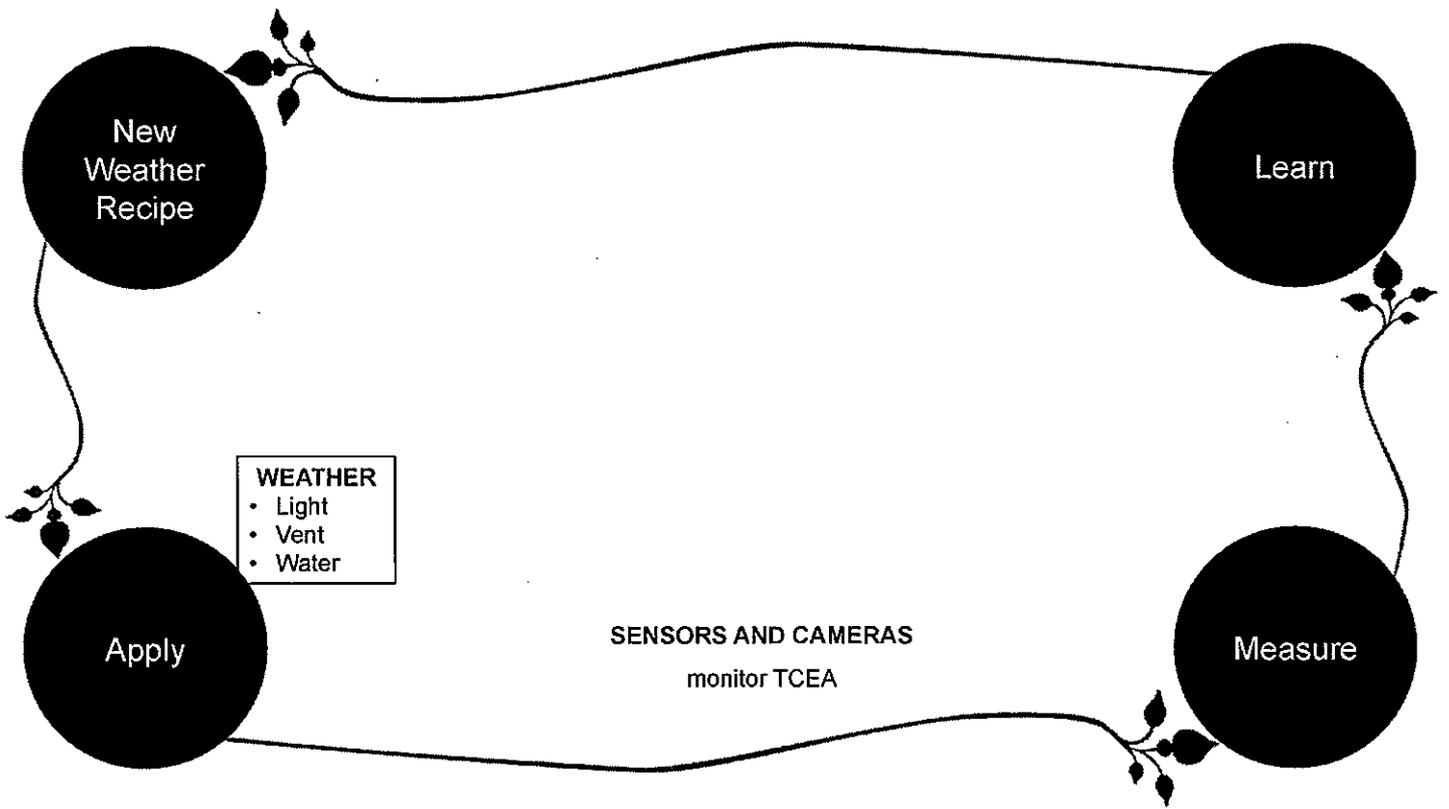

Reduce Labour costs by
Automating
Scaling

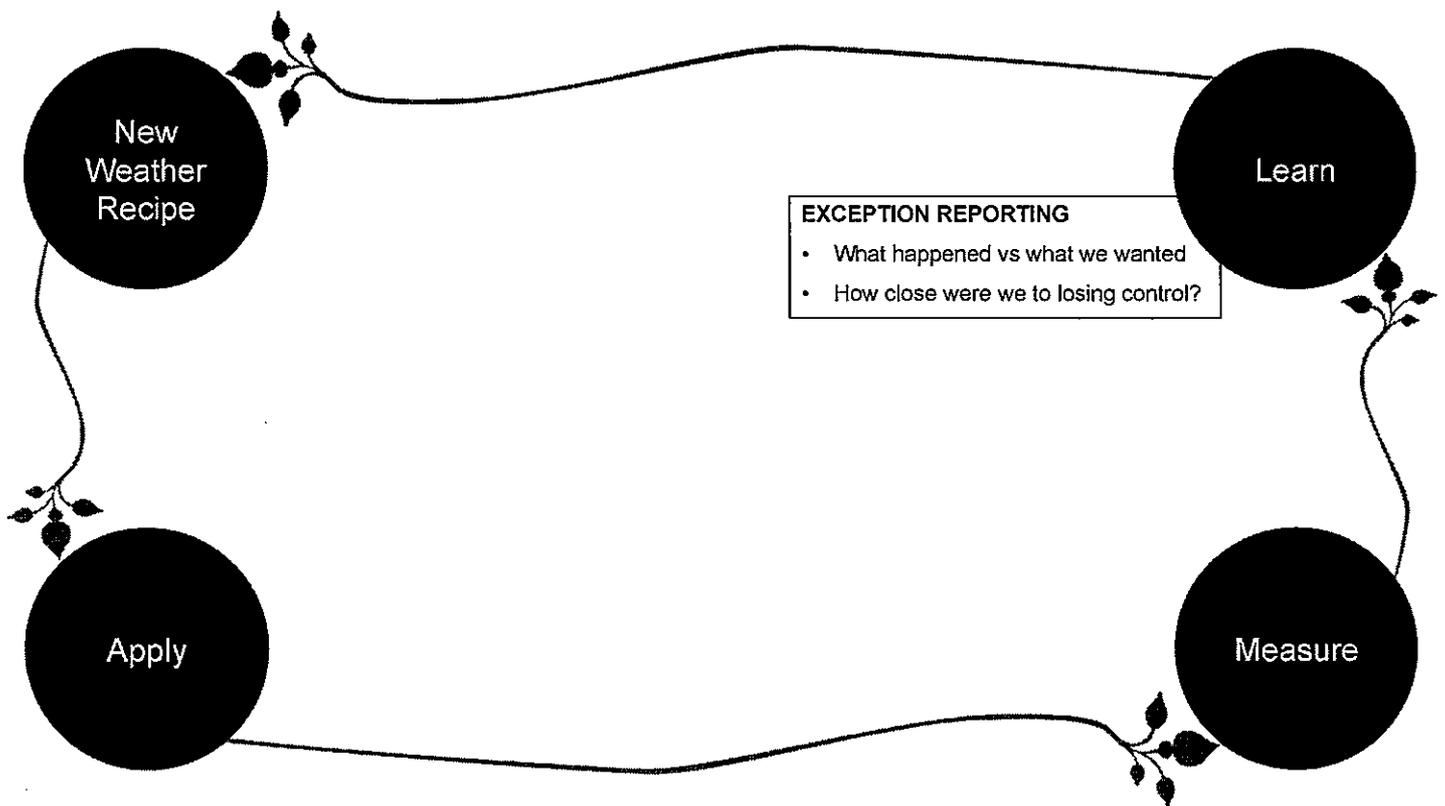

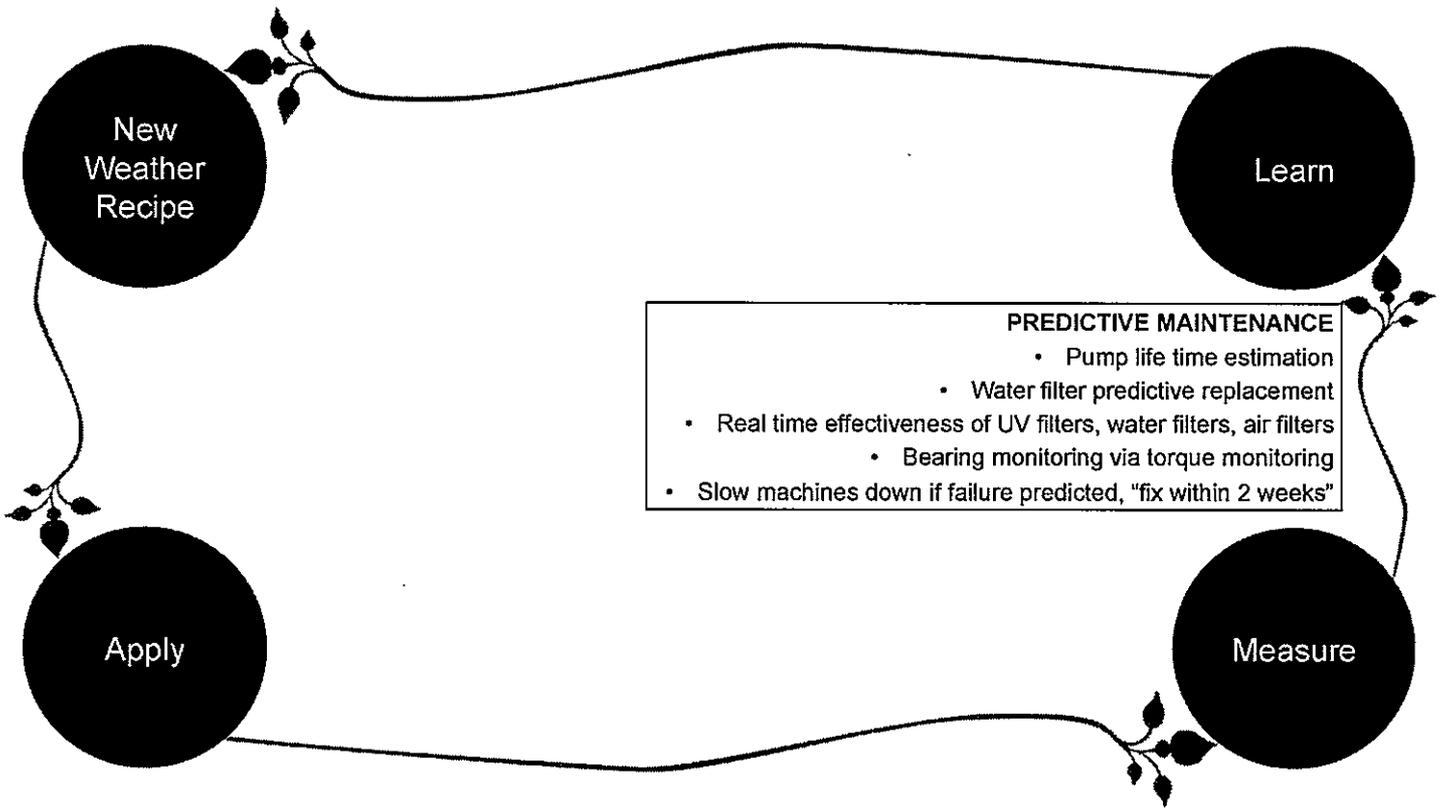

Tech & plant science will deliver
Higher yields
Better quality
Greater consistency

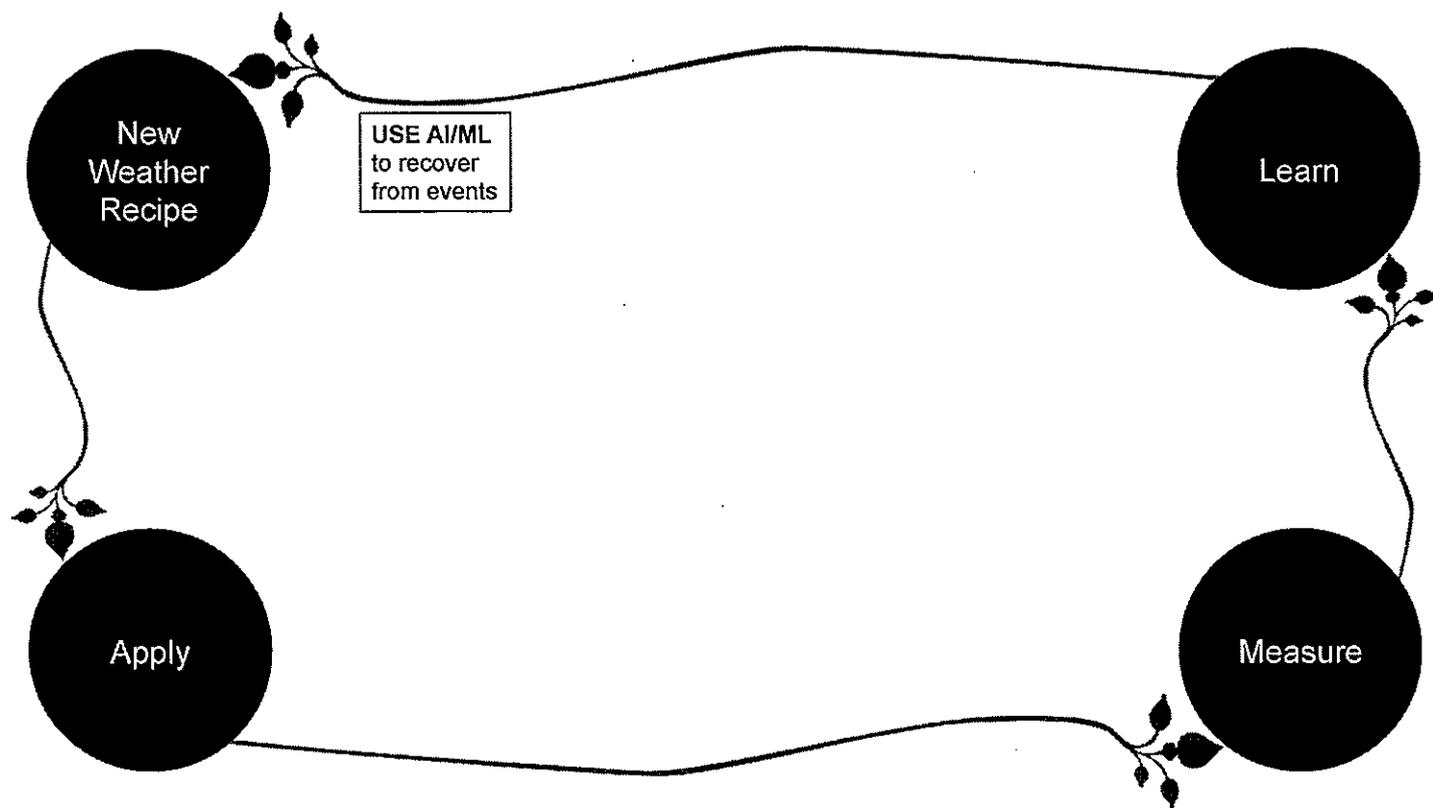

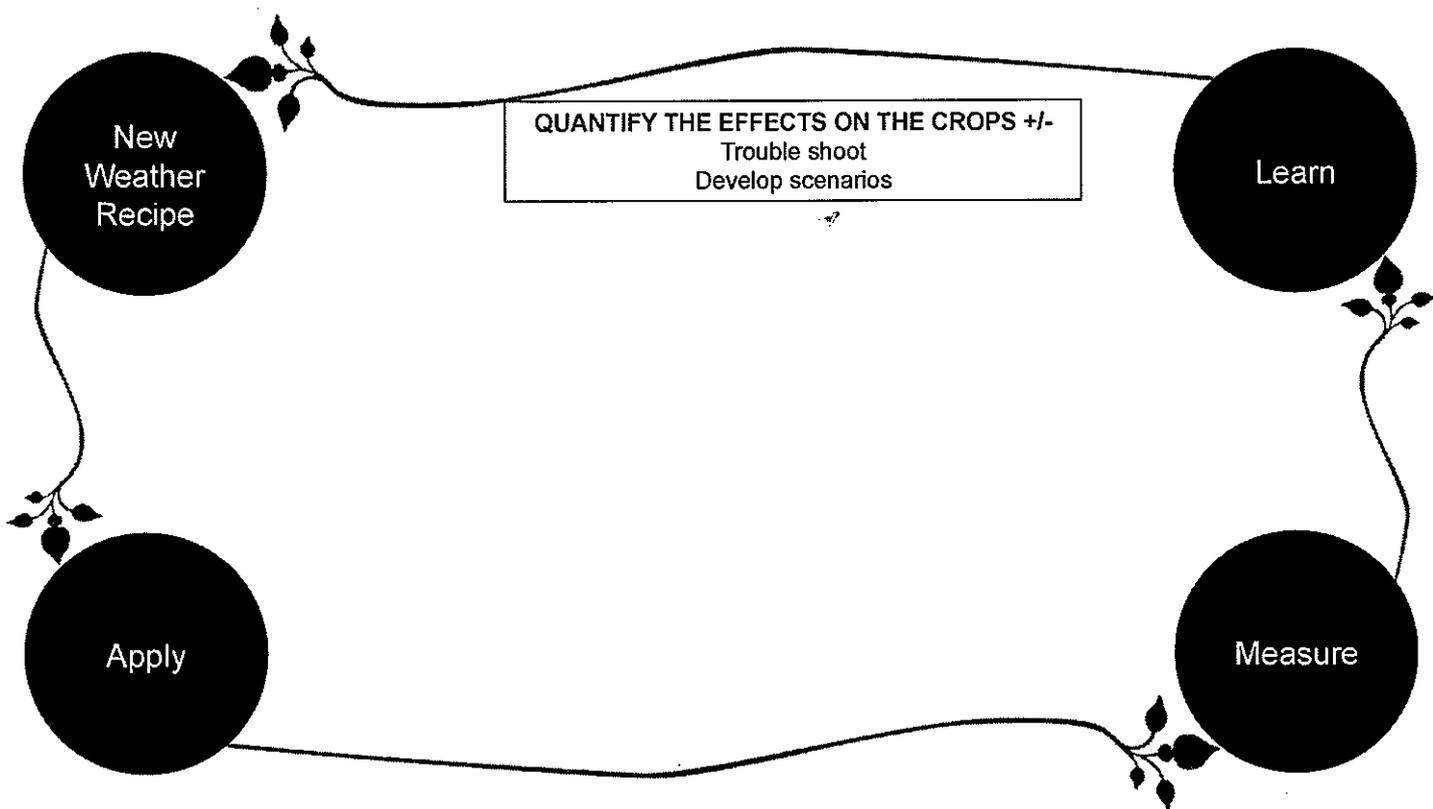

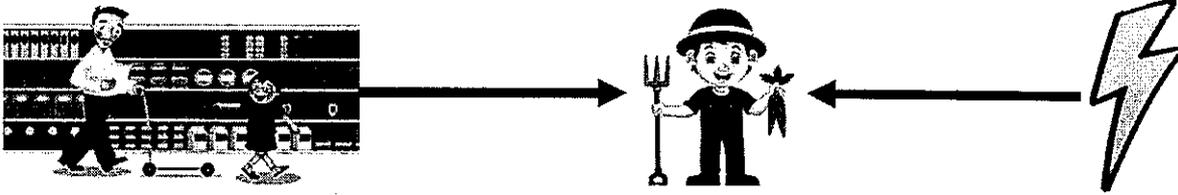

RESPOND TO MARKET REQUIREMENTS

Let the buyer tell you what to grow

Allow operators / scientists across locations to compare results

Flex light and nutrients at different points in growth cycle

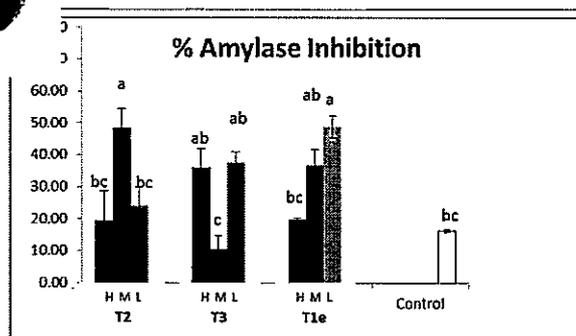

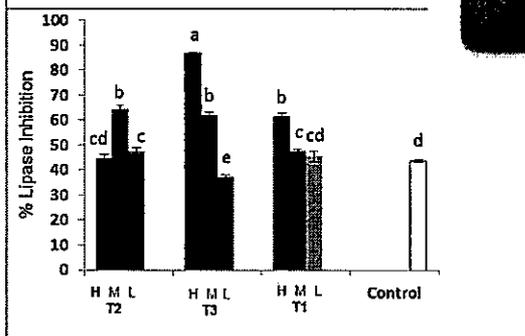

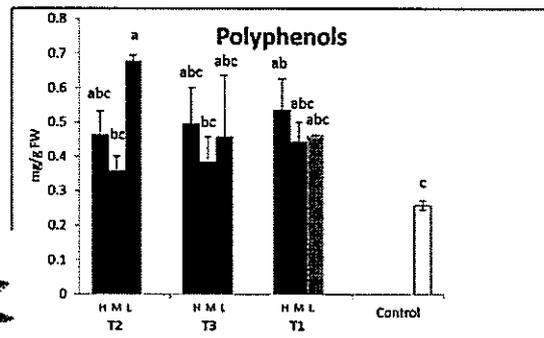

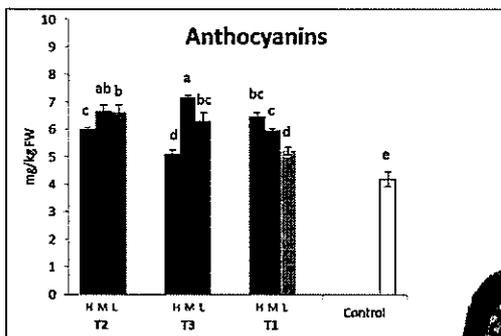

FLEX POWER WITH THE GRID

Slowdown/speed up growth with minimal impact on crop yield, quality, consistency and economics

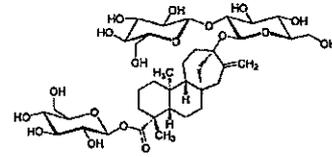

Manipulation of fruit quality health benefits by light modulation

Added Value Products: Stevia

Stevia Market Size Worth \$553.7 Million By 2024 | CAGR 6.1%

Steviol glycosides
30 to 150 times the sweetness of sugar

Needs warm temperatures with minimal frost, adequate rainfall, and lots of sunshine.

- Yield impacted by temperature, drought, over-watering and nutrient levels
- Needs optimisation
- Increase yields 3-5 fold.

Plant-derived compounds launched in clinical trials.

- (a) Infectious and parasitic disease application
- (b) pain and neurological disease application
- (c) cardiovascular and metabolic disease application

Anticancer drugs

Lobelia inflata
(Indian tobacco, puke weed)
Anti-addiction therapy

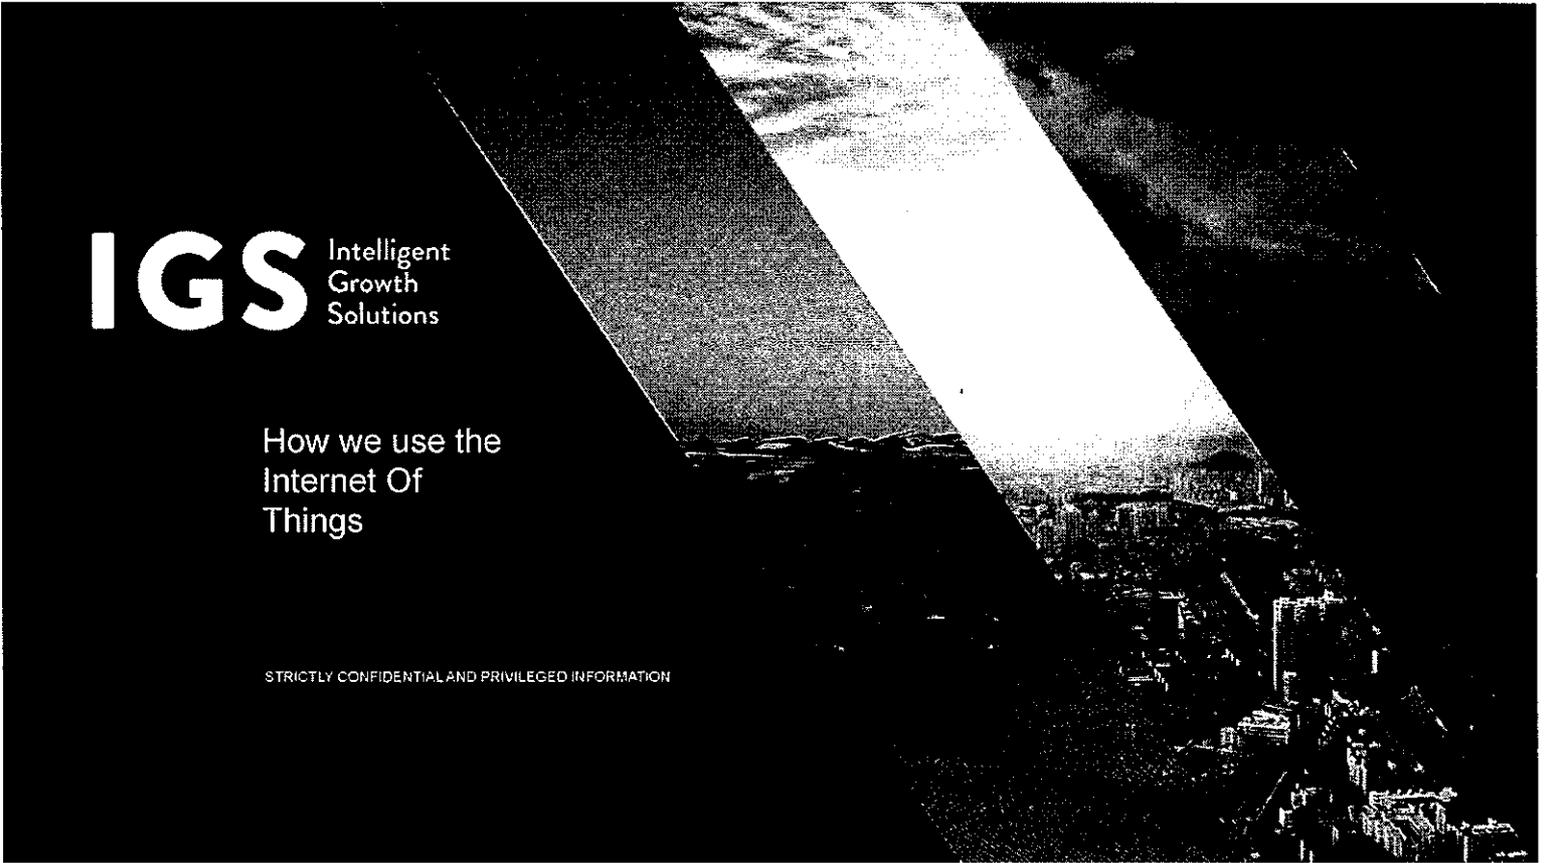

Madagascar periwinkle
- Potent Chemotherapy drug

Saklani, A & Kutty, SK (2008) Drug Discovery Today, 13, 3-4, 161-171

Conclusions

- Food Security is becoming a crucial issue.
- The treats of climate change and extremes are evident and increasing.
- A game change is required in food and crop product production
- The IGS vertical farming system IS that game change
- The IGS system can both produce food (and products) and be used to breed climate resilient varieties for conventional agriculture.
- The system software, energy management and light control makes sustainable profitable production assured.
