

FURTHER EVIDENCE FROM UTILIZATION RATES

UTILIZATION BY LDCS OF CHINA AND INDIA'S PREFERENCE

Submission by Djibouti on behalf of the LDC Group

The following submission, dated 16 May 2023, is being submitted at the request of the delegation of Djibouti on behalf of the LDC Group.

1 BACKGROUND

1.1. As noted by the Least Developed Countries (LDCs) Group in previous submissions, almost eight years have passed since the adoption of the Nairobi Ministerial Decision on Preferential Rules of Origin for LDCs. Since then, the creation of a notification template and the calculation of utilization rates of the Duty-Free and Quota-Free (DFQF) schemes, as well as related discussions on utilization rates, helped to achieve better transparency. However, there has been no parallel progress in implementing the substantive part of the Nairobi Decision. Specifically, the paragraphs concerning substantial transformation, cumulation, and certification requirements have not been implemented yet.

1.2. We are now well past the 5th anniversary of the Nairobi Decision. On 14 April 2022, the Committee on Rules of Origin (CRO) adopted a Decision on Preferential Rules of Origin and the Implementation of the Nairobi Ministerial Decision (G/RO/95). In particular, the CRO's Decision provides:

"The work of the CRO could include identifying and agreeing upon best practices by all Members on preferential rules of origin and related administrative requirements and further analyzing existing origin requirements and the utilization of trade preferences."

1.3. The Ministers who attended the 12th Ministerial Conference of the World Trade Organization (WTO) welcomed this Decision and mandated the CRO to report its work to the General Council ahead of the 13th Ministerial Conference.

1.4. In line with this mandate, the WTO LDC Group hereby wishes to provide its input on the application of Paragraph 2 of the Nairobi Decision, which concerns the topic of cumulation.

1.5. The present submission examines the utilization rates under the China and India trade preferences granted to LDCs using the available data downloaded by the TAO database. This submission is aimed at facilitating discussions on lessons learned and best practices that preference-giving countries could adopt to:

- i. facilitate compliance with origin requirements;
- ii. improve utilization rates; and
- iii. maintain and improve the notifications of data on Utilization rates as contained in the paragraph 4 of the Nairobi decision, in particular paragraph 4.3.

2 A PRELIMINARY ANALYSIS OF UTILIZATION RATES OF CHINA TRADE PREFERENCES GRANTED TO LDCS UNDER DFQF ARRANGEMENTS

2.1. At the October 2019 CRO meeting, the WTO LDC group presented the analysis "Further Evidence from Utilization Rates: Utilization by LDCs of China's Preference" (G/RO/W/192). This analysis showed significant figures of low or zero utilization rate and high variations of utilization rates. China's Representative explained that utilization of other preferences could explain the low utilization of China's LDC preferences (G/RO/M/73). For example, the ASEAN-China Free Trade Agreement (FTA) for the case of Cambodia and Myanmar or the Asia Pacific Trade Agreement for the case of Bangladesh. This response emphasized the need for a correct and complete dataset on Utilization Rates as an indispensable tool, and the analysis presented here is a follow up on the work previously presented by the WTO LDC group.

2.2. The following analysis uses new data that has been downloaded from the TAO. As outlined below the analysis contained in this submission based on 2020 data seems to show similar results. China notified data the WTO for 2016 and 2018. The present submission focuses on 2020 based on WTO-IDB data accessed through TAO last September 2022.

2.3. Figure 1 below shows the distribution of tariff lines over utilization rates value, and a clear polarization can be observed at zero utilization rate as well as above 95%, though the latter much less significant. With a total number of tariff lines of 1,575 included in the graph, this means that 64% of the tariff lines show a utilization rate of 0 while only 17% demonstrate a utilization rate of above 95%. The remaining 19% (293 out of 1,575 tariff lines) are quite evenly distributed in between.

Figure 1: Distribution of tariff lines over utilization rates value Chinese Utilization Rates (2020)

Source: WTO-IDB accessed through TAO Accessed last September 2022

2.4. Figure 2 to 4 depict Chinese utilization rates, preference margin and eligible imports in USD million from the LDC beneficiaries. Significant differences are revealed between the beneficiary countries, and it is worth to note that the three countries with the largest amounts of eligible imports, namely the Democratic Republic of Congo, Zambia and Myanmar, are showing very low utilization rates (between 1-6%). Sudan, Ethiopia, Senegal and Mauritania are the only countries with eligible imports above US\$100 million reporting a utilization rate of above 90. The variation in utilization rates seems to be just as significant regarding beneficiary countries reporting lower covered imports than US\$100 million.

Figure 2: Chinese Utilization Rates, Preference Margin and imports from LDCs - Covered Imports > US\$100 million

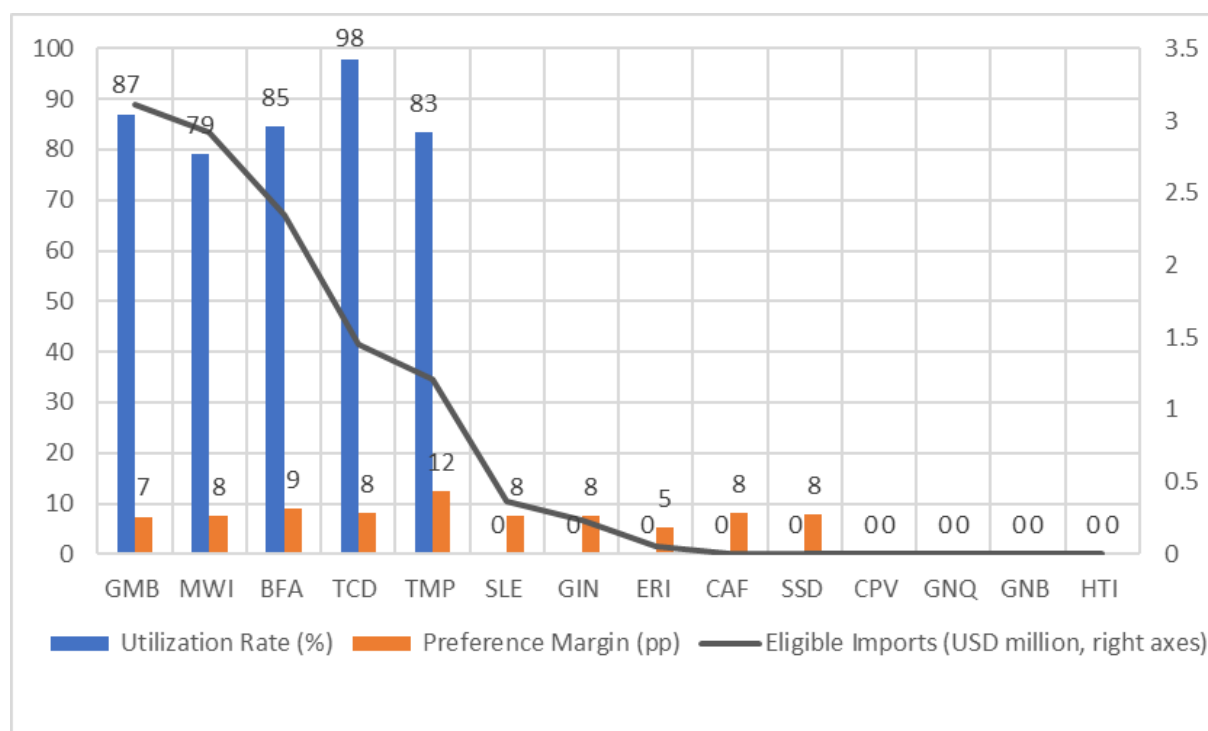

Source: WTO-IDB accessed through TAO Accessed last September 2022

Figure 3: Chinese Utilization Rates, Preference Margin and imports from LDCs - Covered Imports < US\$100 million

Source: WTO-IDB accessed through TAO Accessed last September 2022.

Figure 4: Chinese Utilization Rates, Preference Margin and imports from LDCs - Covered Imports <US\$5 million

Source: WTO-IDB accessed through TAO Accessed last September 2022

2.1 Utilization Rates of China's Preferential Scheme (2020)

2.5. Table 1 shows the value of imports in the year of 2020 to China from LDC beneficiaries (column 1) per tariff line (column 2), sorted in descending value of imports entering under MFN (column 7), and filtered with utilization rate below 70% (column 8) and preference margin above 2 percentage points (column 9). The utilization rate is defined as the value of imports receiving preferential treatment (column 6) divided by the value of imports covered by the PTA (column 5). Note that all values reported in the table are dutiable.

Table 1: LDCs' Utilization Rates of China's Preferential Scheme (2020) - UR < 70%, PM > 2pp, sorted in descending value of imports entering under MFN (>US\$50 million)

Country	Tariff Line	Product Description	Imports (US\$ thousands)				UR (%)	PM (PP)
			Dutiable	Covered	Received			
					GSP/LDC	MFN		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)
DR Congo	74031111	Copper	3,190,194	3,190,193	0	3,190,193	0	2
Zambia	74020000	Unrefined copper	2,992,604	2,992,604	0	2,992,604	0	2
DR Congo	81052010	Intermediate products of cobalt	2,695,813	2,695,813	0	2,695,813	0	4
DR Congo	74020000	Unrefined copper	679,328	679,328	0	679,328	0	2
Myanmar	74031111	Copper	661,414	661,414	0	661,414	0	2
Zambia	74031111	Copper	465,798	465,798	0	465,798	0	2
Angola	27111200	Propane	364,427	364,427	18,007	346,420	4.9	5
Myanmar	28469019	Inorganic chemicals: Other	325,462	325,462	0	325,462	0	5
Myanmar	72026000	Ferronickel	313,352	313,352	0	313,352	0	2
DR Congo	74031119	Copper: Other	244,286	244,286	0	244,286	0	2

Country	Tariff Line	Product Description	Imports (US\$ thousands)				UR (%)	PM (PP)
			Dutiable	Covered	Received			
					GSP/LDC	MFN		
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)

Myanmar	71039910	Jadeite	61,558	61,558	0	61,558	0	4
Bangladesh	62046200	Cotton	68,263	68,263	0	59,435	0	6

Source: TAO Database, 16 September 2022

2.6. According to the table, a significant amount of LDC exports is reported to enter under MFN while covered by the preference scheme. To illustrate the potential savings using the preferences, the 2.7 billion of cobalt products (tariff line 81052010) exported from the Democratic Republic of Congo could with a preference margin of 4 percentage points generate 108 million in duty saving (4% of US\$2,695,813,000).

2.7. HS chapter 74 "Copper and articles thereof" seems to be highly represented in the table, as well as big LDC exporters of these tariff lines (i.e., DR. Congo, Zambia, and Myanmar). However, other HS chapters are also represented such as chapter 27 "Mineral fuels, mineral oils etc.", chapter 28 "Inorganic chemicals etc.", and chapter 62 "Articles of apparel and clothing accessories, not knitted or crocheted".

2.2 Top Two Exports to China with UR < 70% by LDC

2.8. Table 2 of the annex reports the top two exports (column 2 & 3) to China from each LDC beneficiary (column 1) from the year of 2020 with a utilization rate lower than 70% (column 9) and a preference margin above 2 percentage points (column 10). This allows an overview of the sector in each country not making full use of the Chinese preferences offered.

2.9. For example, Liberia exported articles of chapter 89 "Ships, boats and floating structures" to a value of US\$28 million under MFN. With a preference margin of 6.5 percentage points, there is a potential to save almost US\$2 million (6.5% of 28 million).

2.10. In the case of Cambodia however, none exports under chapter 61 "Art of apparel & clothing access, knitted or crocheted" worth US\$239 million, entered under the Chinese LDC preference scheme, but 131 million USD received other preferences, most likely under the ASEAN-China FTA. There is still however US\$108 million receiving MFN, with potential duty savings of US\$7 million as the preference margin is 6.7 percentage points.

2.3 No. of TL by UR intervals and LDC for China (2020)

2.11. Finally, Table 3 in the annex reports the number of tariff lines by utilization rate intervals and LDC beneficiary in the Chinese preferential scheme, sorted in descending value of imports covered. The utilization rate intervals are divided as follows: zero utilization, between zero and 50%, between 50% and 70%, and above 70%. It can be observed, as previously seen, that significant amounts of imports do not make use of the preference scheme, however there is a high variety by country. Sudan, Ethiopia, Senegal and Niger are examples of beneficiary countries that report the highest value of imports covered with a utilization rate above 70%.

2.12. To summarize, considerable amounts of LDC exports seem to enter China under MFN when covered by the preference scheme. Therefore, there are significant duty savings possible for the LDC beneficiaries, and it is of high importance to uncover the underlying mechanisms for low utilization rates regarding a variety of tariff lines, such as stringent product-specific rules of origin,

administrative requirements, compliance of China's Preferences, or duty-free treatment under special import programmes.

3 A PRELIMINARY ANALYSIS OF UTILIZATION RATES OF INDIA TRADE PREFERENCES GRANTED TO LDCS UNDER DFQF ARRANGEMENTS

3.1. In 2008, India has been one the first developing country to offer preferential treatment to LDCs as the Indian Duty-Free Tariff Preference Scheme for LDCs entered into force on the 13th of August in assisting LDCs to better integrate into the global trading system and improve their trading opportunities. It offers 11,506 preferential tariff lines to LDCs of which 10, 991 are duty-free. Out of the duty-free tariff lines, 1,129 are agricultural goods and the remaining 9,862 are non-agricultural goods. India's PTA was latest renewed in 2021 and has no current date of expiration. According to the most recent documentation available on the website of the Indian Ministry of Commerce and Industry, the PTA offers preferential treatment to 34 LDC beneficiaries¹.

3.2. Analyses of the UR of India's DFTP Scheme for LDC have previously shown during the analysis submitted by LDC in 2020 that significant trade flows where utilization rates are minimal or zero. The present submission focuses on 2020 based on WTO-IDB accessed through TAO last September 2022. Note that the Regional Trade Agreement data are not available, this may affect the analysis on Afghanistan, Cambodia, Myanmar, and Nepal.

Figure 5: India's Preferential Scheme (2020) - Distribution of tariff lines over utilization rates value

Source: WTO-IDB accessed through TAO Accessed last September 2022

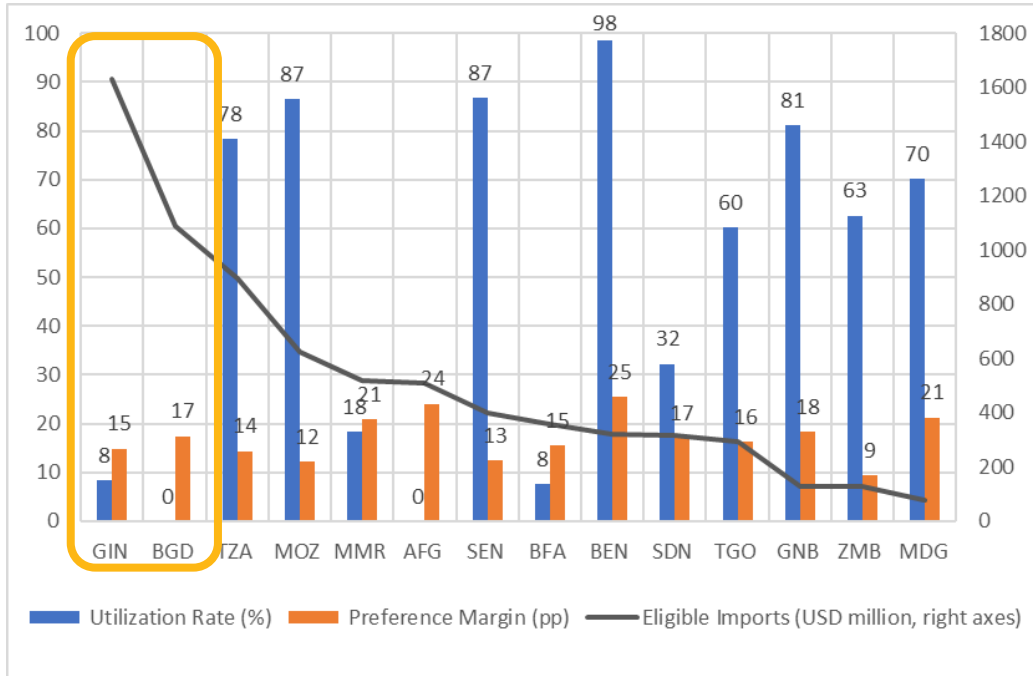

3.3. In figure 5, the distribution of tariff lines over utilization rates intervals of the Indian preferences is reported, and a strong polarization biased towards zero utilization rate can be observed, as well as a small cluster of tariff lines at above 95%. The total number of tariff lines included in the graph is 1505, which means that 85% of the tariff lines show a utilization rate of 0% (compared to 64% regarding China's preferences) and only 8% demonstrate a utilization rate of above 95% (again compared to 17% regarding China's preferences). The remaining 7% (99 out of 1,505 tariff lines) are distributed in between with a slight polarization towards 0 and 95%.

3.4. Figure 6 to 8 reports the Indian utilization rates, preference margin and eligible imports in US\$ million from the LDC beneficiaries. There is a significant variation between the beneficiary LDCs, and the two countries (Guinea and Bangladesh) showing the highest amount of eligible imports simultaneously have very low utilization rates (8% for Guinea and 0% in the case of Bangladesh).

¹ See https://commerce.gov.in/wp-content/uploads/2020/02/MOC_636434269763910839_international_tpp_DFTP.pdf

Benin on the other hand, reports a utilization rate of 98% which is the highest of all beneficiary countries. The utilization rate is as observed subject to significant variation depending on the beneficiary country.

Source: WTO-IDB accessed through TAO Accessed last September 2022

Figure 7: India's Preferential Scheme (2020) - URs, Preferential Margin (PM) and Covered Imports < US\$60 million

Source: WTO-IDB accessed through TAO Accessed last September 2022

Figure 8: India's Preferential Scheme (2020) - Utilization Rates, Preferential Margin (PM) and Covered Imports < US\$2 million

Source: WTO-IDB accessed through TAO Accessed last September 2022

3.2 Indian Utilization Rates (2020)

3.5. Table 4 in the annex shows the value of imports in the year of 2020 to India from LDC beneficiaries (column 1) per tariff line (column 2), sorted in descending value of imports entering under MFN (column 7), and filtered with utilization rate below 70% (column 8) and preference margin above 2 percentage points (column 9). The utilization rate is defined as the value of imports receiving preferential treatment (column 6) divided by the value of imports covered by the PTA (column 5). Note that all values reported in the table are dutiable.

3.6. As was the case for China, noteworthy amounts of LDC exports are entering under MFN even though they are covered by the Indian preference scheme. The preference margins are important, which indicates major potential duty savings. In the case of fixed vegetables oil (tariff line 15159040) exported from Bangladesh to India, there is a preference margin as high as 77.5 percentage points, which would mean US\$74 million duty savings is the preference scheme was used. Most likely, this is not due to lack of awareness from the exporters' side but rather existing barriers to make use of the preferences.

3.7. In general, there is a high variety of the tariff lines represented, as both agricultural goods (HS Chapter 01-24) as well as industrial goods (HS Chapter 25-97) in form of precious stones and petroleum products are listed. The agricultural items seem to be exported exclusively from Asian beneficiary countries whereas raw materials dominate from the African LDCs.

3.3 Top Two Exports to India with UR < 70% by LDC

3.8. Table 5 of the annex reports the top two exports (column 2 & 3) to India from each LDC beneficiary (column 1) from the year of 2020 with a utilization rate lower than 70% (column 9) and a preference margin above 2 percentage points (column 10). This allows an overview of the sector in each beneficiary country not making full use of the Indian preferences offered.

3.9. For instance, Afghanistan exported fruits and nuts under chapter 8 to a value of US\$325 million, all entering under MFN despite the preference margin of 28 percentage points being offered under

the Indian preference scheme. If the preferential treatment would be granted, a potential duty saving of 91 million USD could be possible.

3.10. A similar pattern is visible for many of the LDC exports. In the case of Chad, exports of Mineral fuels, oils and products etc. from HS chapter 27 to a value of US\$48 million are entering India under MFN, and with a preference margin of 5 percentage points utilization of the preferential treatment would implicate potential duty savings of US\$2.4 million.

3.4 No. of TL by UR intervals and LDC for India (2020)

3.11. Lastly, table number 6 in the annex reports the number of tariff lines by utilization rate intervals and LDC beneficiary in the Indian preferential scheme, sorted in descending value of imports covered. The utilization rate intervals are divided as follows: zero utilization, between zero and 50%, between 50% and 70%, and above 70%. Consistent with previously observed trends, important amounts of LDC exports are not granted preferential treatment in spite of the fact that they are covered. There is however significant variation between the beneficiary countries. Tanzania, Mozambique, and Senegal are a few examples of countries where high amounts of covered imports show a utilization rate higher than 70%.

4 CONCLUSION

4.1. The Results of the analysis carried out on the basis of the dataset notified to the WTO Secretariat show similar results of low utilization of China and India's Preferences, that was previously highlighted in the LDC submission of 2010 which needs to be addressed. The problem applies to a wide range of tariff lines including wholly obtained products, clothing and textile, precious stones. The LDCs fully understand and appreciate that the data may be incomplete and as such may not provide an accurate representation of the URs of China and India. For this reason, LDC calls on China and India to redouble efforts to provide the WTO secretariat with an appropriate and complete set of data. The LDCs further invite China and India to also share their own analysis based on the notified data to the WTO secretariat at the next CRO.
