Trading in a Digital Evolution

Matt Moore

Director | eCert & Micor

Discussion today

Part 1 -

High level overview of what's in part 1 presentation

Part 2 – Q & A

High level overview of what's in Part 2 for the Q & A.

Also can be a space for any other questions or discussions other participants may like to raise or discuss on the topic of "Trading in a digital evolution"

Trade has changed

- The growth of technology solutions and the impact of the COVID-19 pandemic, has caused a rethink in how we share information.
- How can we be more efficient and get the same outcomes if not better results?
- What options are available to us?
 - Who has done this before?
 - Are there any agreed standards?
 - What is the end goal?

Guidance and Standards

The Codex Alimentarius
Commission (**Codex**)

Food and Agriculture
Organization of the
United Nations

World Organisation
for Animal Health
Founded as OIE

World Organisation for Animal
Health (**WOAH**)

International Plant
Protection Convention (**IPPC**)

International
Plant Protection
Convention

World Trade
Organization (**WTO**)

STDF

Standards and Trade
Development Facility (**STDF**)

OECD

The Organisation for Economic
Co-operation and
Development (**OECD**)

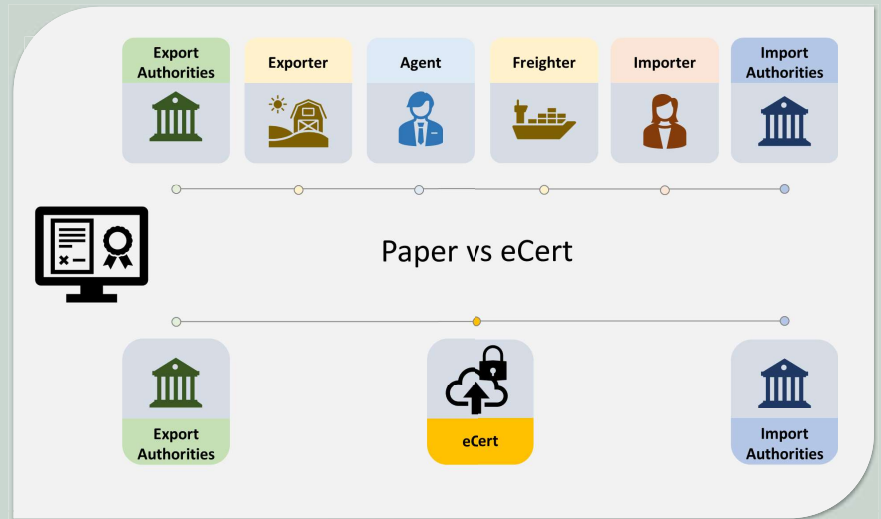

The United Nations Centre for
Trade Facilitation and Electronic
Business (**UN/CEFACT**)

UNECE
UN/CEFACT

Electronic Certification (eCert)

- eCert is the secure electronic data transmission of SPS certificates
- eCert expansion is ongoing in both bilateral and multilateral forums
 - Objective is paperless certification
- Streamline the certification process for the Government and Business
- Supports the use of technology in other areas of border clearance

Benefits of eCert

Government to Government (G2G) and Fraud Reduction

The G2G nature of eCert means it can provide the assurance that:

- The certificate came from the listed Competent Authority
- It is a genuine certificate

Going paperless reduces the opportunity for fraudulent activity.

- Paper certificates can be replicated and presented as genuine certificates
- This provides an opportunity for unapproved goods to enter a country
- Being paperless removes the risk of goods entering a country on the presentation of fraudulent paper documents.

Prior Notification and Pre-Clearance

- eCert provides importing authorities knowledge of what will be arriving, potentially within minutes of a Competent Authority issuing the certificate.
- This prior notification provides the opportunity for the pre-clearance of goods.

Where goods may not require an inspection or only in certain circumstance, once receiving the eCert the importing authority/system may be able to grant pre-clearance before the goods arrive.

- Prior notification allows Competent Authorities the opportunity to use their work force in a more target way.

Verification and Problem Resolution

Different elements of certificate verification can be used such as:

eCert can assist to resolve common paper certification problems. For example:

Linking certification to import permits

Listing checks on producers

No more waiting for replacement paper certificates.

Reduce storage costs for consignments held at borders.

Reduce congestion at border clearance points.

Considerations for any move to digital

- Know what you want
- Understand what you and others need
- Driven by process not by IT

Plan

Discuss

- Work with IT and other teams to plan
- Agree on the process and Objectives

- Aim for it to be flexible for the future
- Aim for non-IT people to be able to create and update

Build

Trial

- Find a partner to work with who are on the same path.
- Understand what "ready to use" is, for you

Implement

- Implement and enjoy the benefits
- Do a review of your learnings and success
- Plan to expand and build on successes

Learnings

- The first steps are the hardest, but you can get momentum quickly with proper planning.
- Don't over complicate it. More is not always better.
- Be aware that Legislation, rules, policy and business process may need to change.
 - Identify these early as part of the planning.
- Important to understand who you are working with, and whether there are multiple stakeholders.
 - Some countries have split their biosecurity and export functions across multiple agencies.
 - There may be multiple stakeholders in the one country who are involved in the import and clearance of a single consignment.

Always Evolving

- eCert is a great example of digital possibilities
- Digital growth changes our conversations
- Moving to digital doesn't mean changing requirements
- IT will always move at a fast rate and that's ok.
 - Technology is always developing and evolving at a fast pace.
 - This means we need to consider when it is good to use and when is it overcomplicating?
- Linkages to other systems
 - Single trade windows
 - Domestic systems

Q & A

- What do you see is a crucial factor for a successful digital future?
- How do you see the work currently ongoing within the standard setting space, impacting the work which countries have already done in the digital space/currently building?

Thank You

The background of the 'Thank You' slide is a composite image. The top half shows a cityscape at night with a red and blue color palette, overlaid with digital data visualizations like bar charts and line graphs. The bottom half shows a similar cityscape but with a blue and green color palette, also featuring digital data overlays and binary code (0s and 1s) scattered across the scene.

Treatment Certificate Portal and Risk Profiling

2024 QRM

Sam Griffiths

Australian Department of Agriculture, Fisheries and Forestry

Context

- International trade is underpinned by effective biosecurity treatments
- Particularly for fumigation, the biggest risks for an ineffective treatments:
 - Incorrect treatment schedule (rate, temperature, time) applied
 - Consignment not suitable for treatment
 - Inaccurate, incomplete or false concentration monitoring readings
- Largely this is driven by:
 - Lack of capacity or capability to comply with requirements (inadvertent)
 - Commercial disincentives to comply (deliberate and fraudulent)

Treatment documentation

**BROWN MARMORATED STINK BUG
SULFURYL FLUORIDE FUMIGATION CERTIFICATE**
Certificate number: [REDACTED] - Page 1/2 AEI: [REDACTED]

CONSIGNMENT DETAILS

Goods description: [REDACTED] service parts Quantity: 49
 Consignment link: [REDACTED]
 Country of origin: [REDACTED] Port of loading: [REDACTED] Country of destination: Australia
 Name and address of exporter: [REDACTED] Name and address of importer: [REDACTED]

TREATMENT DETAILS

Date fumigation completed: 2024 / 04 / 23 Time fumigation completed: 07:30
 Date ventilation commenced: 2024 / 04 / 23 Time ventilation commenced: 07:05
 Town/city fumigation: [REDACTED] Exposure period (hours): 14
 Dose rate applied: [REDACTED] g/m³ or [REDACTED] oz/1000ft³: 24 Minimum temperature ([REDACTED] °C or [REDACTED] °F): +10
 Lowest end-point reading [REDACTED] g/m³ or [REDACTED] oz/1000ft³: 12 Final TLV reading (ppm): 1.0 (TGRS 512)
 How was the fumigation conducted? Un-sheeted container Sheeted container/s
 Chamber Sheeted stack
 Were the goods treated in the container they will be shipped in Yes or No (No, includes break-bulk goods)
 Container number: [REDACTED] or [REDACTED] not applicable
 Was a container seal applied by the treatment provider within 120 hours of the treatment completion? If yes - Seal number: [REDACTED] Yes or No
 Was all shipping packaging/wrapping removed or configured in a way that allowed the fumigant to access all surfaces of the goods? Yes or No or NA
 Was all commercial packaging applied as part of the good's manufacturing process? (select NA if commercial packaging was not present at the time of treatment) Yes or No or NA

DECLARATION

I declare that all information on this certificate is true, complete and accurate, and that the treatment has been conducted in accordance with the Sulfuryl Fluoride Fumigation Methodology Yes

ADDITIONAL DECLARATIONS

[REDACTED]

Department of Agriculture and Fisheries
2024 / 04 / 30

BMSB Sulfuryl Fluoride - Record of Fumigation - Metric

Job Details

Job Identification: 227.2 Customer Name: [REDACTED] Start Date of Fumigation: 2024-04-22 Location: [REDACTED]
 Description of Consignment: [REDACTED] service parts - 49 pcs
 Target of Fumigation: [REDACTED] service parts Container Numbers / Consignment Identification: [REDACTED]

Fumigation Details

Was all shipping packaging/wrapping removed or configured in a way that allowed the fumigant to access all surfaces of the goods? Yes No NA
 Was all commercial packaging applied as part of the goods manufacturing process? (select NA if commercial packaging was not present at the time of treatment) Yes No NA
 Sheeted Stack Length = [REDACTED] Un-sheeted Container Volume (m³): 766
 Sheeted Container/s Width = [REDACTED] Chamber
 Size: 40 Qty: 112 Height = [REDACTED]

Specified Dose Rate: 24 g/m³ Exposure Period: 14 hrs Forecast Minimum Temp: 10 °C Fumigation Minimum Temp (if heated): [REDACTED] °C
 Calculated Dose: 18.33 g Actual Dose Applied (calculated from number of): 2.000 g Time Dosing Finished: 16:51

Concentration Readings

Phase	Time of Reading	Dose rate g/m ³	Monitor Line Readings by Location					Equilibrium Calculation	Top-up Dose
			1:	2:	3:	4:	5:	%	
Start	17:00	24	25	24	24			61	NA
During		NA						NA	
End	07:00	12	13	14	14			NA	NA

Comments: [REDACTED]

Ventilation

Time commenced: 07:05 Date commenced: 2024-04-23 Final TLV reading: 1.0 ppm Date & time reading taken: 2024-04-23 07:05

Questions?

Emerging Trends, vulnerabilities and opportunities

Presented by: Anna Brezzo

Our biosecurity system

Australia's biosecurity system protects our economy, environment and people from the impacts of exotic pests, weeds and diseases arriving on our shores.

International engagement

Our purpose

To protect Australia from risks to our biosecurity and trade system by strengthening our compliance, intelligence and investigation outcomes through active engagement and collaboration with stakeholders within the international domain.

Our objectives

Exporting to Australia

Australia has strong trade links around the world and to continue those arrangements, we have a strong biosecurity system to protect our agriculture and environment. Pests, weeds and diseases can arrive in Australia with:

Intelligence Capability

RFI SUPPORT

Processes internal and external requests for information

- Supports case management establishment
- Essential relationship with key external agencies and departments

TACTICAL INTELLIGENCE

Provides tactical support to investigations
Develops analytical insights regarding

- Develops analytical insights regarding suspected non-compliance and inform decision making
- Entity specific – a current risk

OPERATIONAL INTELLIGENCE

Develops insights regarding operational environment

- Contributes to emerging border evasion methodologies and / or trends

Capabilities

- Intelligence products
- Interagency intelligence sharing
- Open-source collection
- Entity charting
- Limited criminal intelligence holdings
- Business / company holdings
- Financial intelligence holdings (in progress)
- Targeted research and analysis on specific topics or regions of interest

Domestic Border Intelligence Collaboration

Quarantine treatment alternatives to methyl bromide for perishable goods - preliminary trial experience with ethyl formate in Taiwan

Dr. Kuo-Shiou, Huang
Animal and Plant Health Inspection Agency (APHIA)
MAY 13-17, 2024,
2024 QRM, Vietnam

Outline

- Introduction
- Selection of alternatives
- Character of ethyl formate
- Preliminary trial
- Ethyl formate issue

Why need alternatives to MB?

- Methyl bromide is an efficient fumigant but must be phased out following the Montreal Protocol
- MB is a toxic material in particular occupational neurologic effects upon prolonged exposure for fumigation employees

Which alternatives?

- ISPM 43: Requirements for the use of fumigation as a phytosanitary measure- Appendix 1: other 9 fumigants
- Other than ISPM43: Treatment standard of US, JP, AU, NZ and TW: CO₂, ethylene oxide

APPENDIX 1: Chemical pro

Fumigant active substance	Formula
Carbonyl sulphide	COS
Ethane dinitrile	C ₂ N ₂
Ethyl formate	CH ₃ .CH ₂ .COOH
Hydrogen cyanide	HCN
Methyl bromide	CH ₃ Br
Methyl iodide	CH ₃ I
Methyl isothiocyanate	C ₂ H ₃ NS
Phosphine	PH ₃
Sulphur dioxide	SO ₂
Sulphuryl fluoride	SO ₂ F ₂

Characteristics be considered

- Resource
- Regulated Toxic Chemical Substance
- Regulatory restrictions
- Safety
- Target and effect
- Processing time
- Equipment cost
- Commercialized product

No. 1: Ethyl formate

- No MRL
- Not on the list of Regulated Toxic Chemical of EPA
- Sustainable, not ozone depleting fumigant
- Safety
- Common targets and well effect
- Short processing time
- Low cost of equipment modification
- Commercialized product

Introducing chemicals

- Imported from AU
- 16.7% ethyl formate $C_3H_6O_2$ + 83.3% balance CO_2
- Pesticide registration
 - US, AU, NZ, KR
 - No MRL

Preliminary trial-1

- Cabbage, 120 g/m³, 1h

		cabbage, aphid		
			tube	
		N	Death	Mortality
1st	1	54	54	100.00%
	2	74	74	100.00%
	3	38	38	100.00%
	4	23	23	100.00%
2nd	1	54	54	100.00%
	2	36	36	100.00%
	3	48	48	100.00%
	4	49	49	100.00%
3rd	1	49	49	100.00%
	2	56	56	100.00%
	3	37	37	100.00%
	4	55	55	100.00%
CK	1	22	0	0.00%
	2	37	0	0.00%
	3	33	0	0.00%
	4	23	0	0.00%

Preliminary trial-2

Pests
all dead

- Sugar apple, 420 g/m³, 2h

After 24 h,
browning, no
commercial value

- Sugar apple, 160 g/m³, 1h

Left: after 48 h

Right: after 72 h

Ethyl formate issue

- Limited to approved commodities and pests
- Equipment can be expensive
- Pesticide management regulation in Taiwan
- Limited availability through global supply chain

Questions?

Regulation & Collaboration: the future of biosecurity

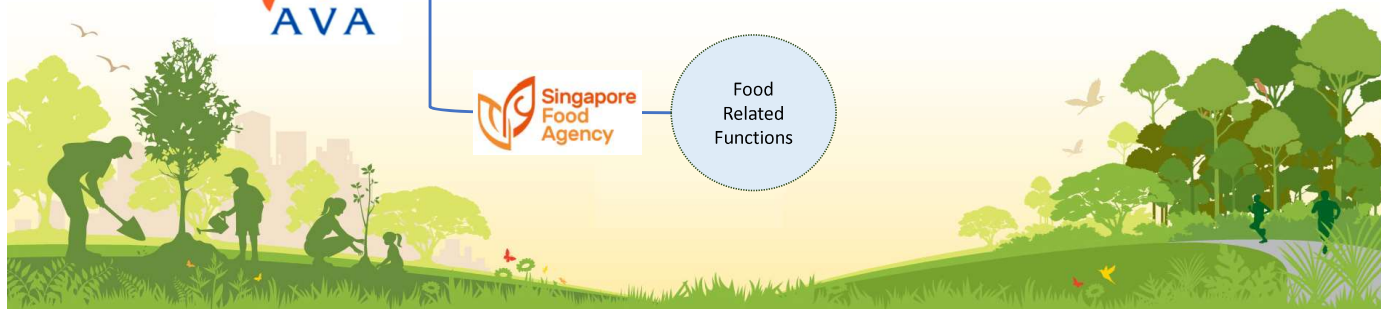

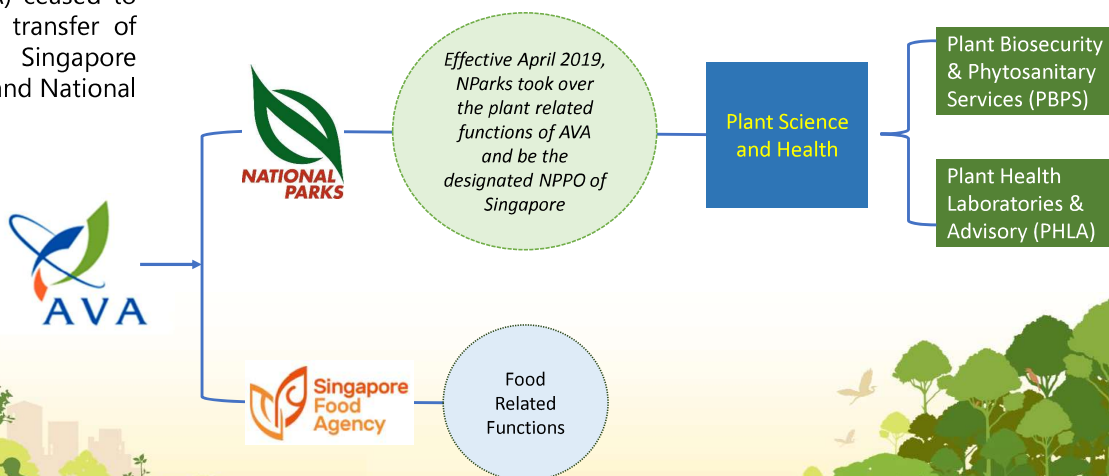

Sharing of Singapore and Australia Collaboration

By Eric Casiano Tulang, NParks, Singapore

National Plant Protection Organization [NPPO] of Singapore

Agri-Food and Veterinary Authority (AVA) ceased to exist with the transfer of functions to Singapore Food Agency and National Parks Board

Functions of NParks

Export Services [Trade Facilitation]

- Phytosanitary certification
- Laboratory testing
- Assurance Certification Scheme [ACS]
- Treatment Provider Scheme [TPS]

Country	Top List of Exported Commodity	Top List of Imported Commodity
Malaysia	Wooden pallets, Wheat pollard/bran, Sesame meal	Sawn timber, coffee beans, cut-flowers
Indonesia	Cocoa products, Vegetable oil, Tea	Coconut residue, Tobacco, dried spices
China	Cocoa products, Wheat pollard/bran, Vegetable fats	Coffee beans, Cut-foliages, Wooden blocks
Brunei	Timber	Dried spices, fruits & vegetables, fresh cut-flowers
Japan	Aquarium plants, Orchids, ornamental plants	Coffee beans, cut-foliages, cut-flowers
India	Flour, Wooden furniture, vegetable oil	Coffee beans, Seeds & nuts for consumption, Veneer raw
Thailand	Cocoa products, Tea powder, Vegetable oil	Dried spices, Coffee beans, Stored products (beans, rice)
Vietnam	Wooden furniture, Cocoa products, Cane/rattan	Wood products, Agar wood
Philippines	Cocoa products, Coffee powder, Wooden furniture	Coffee beans, Rice, Tobacco
Canada	Aquarium & ornamental plants, orchids	NIL

Import [Regulation]

- Ensure compliance to import requirements through import certification [Commercial and Non-Commercial Trade]
- Laboratory testing
- Biosecurity Assurance Arrangement [BSAA]
- Import Risk Assessment

Country	Top 3 Commodities		
	1	2	3
China	Fresh Cut Flowers	Ornamental Plants	Medicinal Products [Herbs]
Malaysia	Grass	Ornamental Plants	Fresh Cut Flowers
Thailand	Fresh Cut Flowers	Ornamental Plants	Grass
Netherlands	Fresh Cut Flowers	Ornamental Plants	Seeds for Planting
Taiwan	Fresh Cut Flowers	Ornamental Plants	Seeds for Planting
Indonesia	Wood products	Fresh Cut Flowers	Live Insects [Butterfly]
India	Fresh Cut Flowers	Seeds for Planting	Potting medium

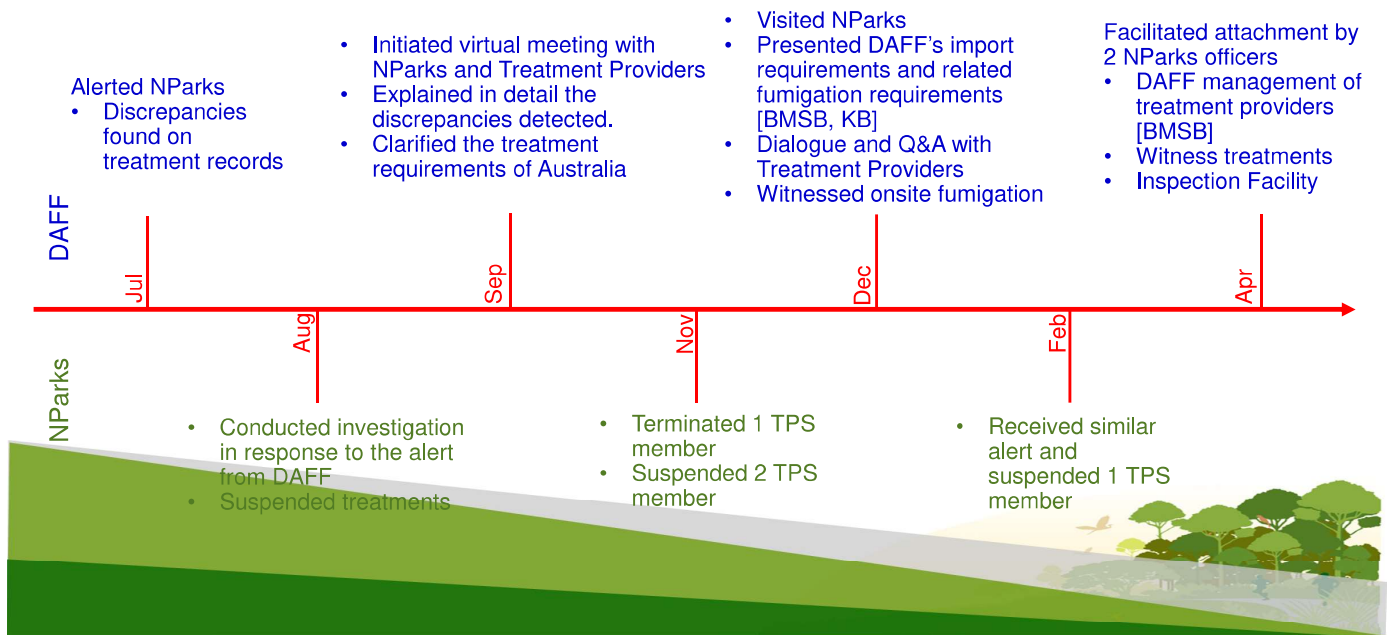

Treatment Provider Scheme

- This voluntary scheme specifies the requirements for a treatment provider to be accredited with NParks to carry out phytosanitary treatment(s) to meet export certification requirements and biosecurity conditions of entry.
- Only treatments from TPS companies are recognized and endorsed by NParks for phytosanitary certification
- Subject to compliance audits
- Majority of treatments are for wood packaging materials following ISPM 15 guidelines
- 40 Heat Treatment Providers
- 21 Fumigation Companies

Regulation & Collaboration: the future of biosecurity

THE FUTURE OF BIOSECURITY IN THE OIRSA REGION

Innovation and Development

ORGANISMO INTERNACIONAL REGIONAL DE SANIDAD AGROPECUARIA

OIRSA is an international organism whose mission is to support the efforts of each Member states' Ministries and Secretariats of State of Agriculture and Livestock in the development of Plant and Animal Health plans, **Quarantine Services** and Food Safety.

Regional Direction of Quarantine Services

SEPA- is the Agriculture and Livestock Protection Service, currently operating in Guatemala and Honduras. Responsible for carrying out intrusive and non-intrusive inspection in maritime, air and terrestrial means of transportation, as well as international passenger's luggage.

SITC- is the International Quarantine Treatment Services, currently operating in all member states of OIRSA: México, Belize, Central America, and Dominican Republic. In charge of applying quarantine treatments as needed due to interception of a regulated plague or pre-shipment requirements.

FITO AND ZOOSANITARY THREATS TO OIRSA REGION

NEW TECHNOLOGIES AND INNOVATION IN QUARANTINE TREATMENT SERVICES

► Ethanedinitrile

OIRSA is promoting the exploration of other fumigant options to reduce the use of methyl bromide, in accordance with the agreements established in the Montreal Protocol.

Progress has been made in Panama for the registration of EDN in the country to be used as a fumigant in wood.

Last February, with the support of the Plant Health Direction of the Ministry of Agricultural Development, MIDA, a first field application exercise of the EDN was carried out in Panama.

NEW TECHNOLOGIES AND INNOVATION IN QUARANTINE TREATMENT SERVICES

Draslovka

Methyl Bromide Alternatives Outreach

WBVO

NEW TECHNOLOGIES AND INNOVATION IN QUARANTINE TREATMENT SERVICES

► Irradiation

OIRSA is committed to offering the Ministries of Agriculture and Livestock of the member states the best tools for the care of their agricultural heritage, as well as promoting the opening of new international trade partners.

It is for this reason that the construction of an irradiation plant for products of animal and plant origin is sought in at least one of the countries in the region.

Actions have been carried out with support from the National Center for Electron Beam Research at Texas A&M University for the implementation of this irradiation plant.

SAVE THE DATE

INNOVATION IN K9 UNIT FOR NON-INTRUSIVE INSPECTION

The Canine Unit program in OIRSA region began in 2018. At this moment we have over 90 service dogs for agricultural quarantine protection.

In Dominican Republic, an innovative procedure was implemented in 2021 due to the declaration of presence of ASF, making the non-intrusive inspection in origin in departure passengers to prevent potentially risky products to reach free of disease countries.

Additionally, the canine unit has been adding new interest scents in their olfactory memory. Last April, a group of 21 canine units, traveled to Panamá to impregnate in their olfactory memory, the scent of New World Screwworm (NWS) to strengthen inspection of animals in borders and animal mobilization check-points.

K9 UNIT

TRAINING IN SIMULATION ROOMS FOR REGIONAL QUARANTINE

Vigi**musa**

SALA DE SIMULACIÓN VIRTUAL CON
TECNOLOGÍAS INMERSIVAS

VIRTUAL SIMULATION ROOM WITH IMMERSIVE TECHNOLOGIES

Is a new project for the training of our quarantine officials, specially for scenarios that are difficult to access in real life situations, like aircrafts and ships, and in possible dangerous situations like first training in a fumigation site.

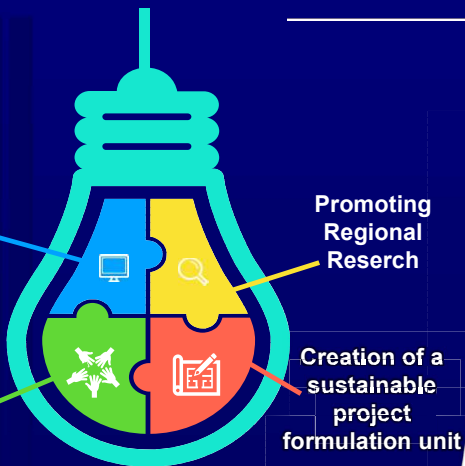

Looking into the future For OIRSA region

Incorporation of New Technologies

Promoting Regional Reserch

Strengthening of regional unification

Creation of a sustainable project formulation unit

Fisheries and Forestry

Sea Container Focus Group – Update

QRM – May 2024

Rama Karri
Pacific Plant Protection Organization Representative

TOPICS

- Purpose
- Global Risk Context
- Sea Container Commerce – Complexities
- Options Explored
- Key Areas Of Focus
- Potential Future Solutions
- Next Steps

PURPOSE

The purpose of this Focus Group is to review all relevant materials and recommendations, develop viable options that will contribute to risk management, and provide CPM with recommendations, including the option of development of an ISPM.

Key functions, included, but are not limited to:

- identify and describe a preferred option or options;
- examine the practicalities needed for such options;
- explore the global commercially driven solution;
- revise CPM recommendation on Sea containers (R-06);
- consider and estimate the resources required by NPPOs and industry parties to establish and operate preferred options.

GLOBAL RISK CONTEXT

- Sea container cleanliness data from four countries
- International literature review to collect evidence of:
 - Pest spread linked to the sea container pathway
 - Costs associated with management of introduced and established pests

Results:

- Interception rates – 20 -56 % (packed); 15 -33% (empty)
- Over 90 % of external risks (undersides); internal risks (floors)
- 9 pests – 100 of World’s Worst Invasive Species – GIS database

Consensus – enough scientific evidence – global action required!

INCORPORATING SAFE TRADE INTO SEA CONTAINER COMMERCE – COMPLEXITIES

- Over 250 million sea containers shipped per annum
- Complex and many supply chain interactions, therefore multiple stakeholders involved
- Clear understanding of roles and responsibilities required
- Ports and Terminals – capacity and space
- NPPO’s capabilities and capacities – limitations

Solutions MUST be practical, effective and cost-effective

OPTIONS EXPLORED

- Awareness raising, education and outreach
- Industry-led programs
- Best practices at critical points in the supply chain by industry
- Automated detection capabilities
- Improved container designs
- International phytosanitary standard
- Third party authorization with NPPO oversight
- Incorporating phytosanitary measures into multilateral frameworks
- Revisions to CTU Code

KEY AREAS OF FOCUS

- Revised CPM Recommendation
- Custodial Responsibility concept
- CTU Code updates
- Pest risk assessment
- WCO initiatives – changes to Data Models and updates to SAFE Framework
- Improvements to sea container designs

International Workshop in Australia - collectively discussed and considered the above.

Revised CPM Recommendation on sea containers

- Interim guidance
- 9 recommendations

Custodial responsibility

- Industry-led solution
- Responsibility of the receiving container custodian to hold the previous custodian in the supply chain accountable

Updates to CTU Code

- A joint publication of IMO, ILO and UNECE – non-mandatory global code of practice for handling and packing of containers
- Updates – a new chapter on pest contamination; replacing current Annex 6 with a placemat; amendments to chapter 4 regarding roles and responsibilities

Sea container pathway – global risk assessment

- Analysed data collected from 4 countries
- Reviewed International literature review on spread of pests
- Assessed costs associated with management of pests

WCO initiatives

- Update to SAFE Framework - Two proposals:
 - Cooperation between Customs and Agricultural agencies to align compliance and other activities
 - Collaboration between border agencies to harmonise border control process, measures and strategies

WCO initiatives

- WCO Data Models
 - Tracking container cleanliness through customs declarations
 - Not possible for empty containers
 - Responsible parties for customs declarations and cleanliness declarations identified

Improvements to container designs

- Floor types that have no gaps, are less prone to developing cracks and crevices, and that are easier to clean
- Light-coloured coatings to container undercarriages to improve the detectability of pest contamination

Australia and China are undertaking container design trials to collect data to inform additional improvements to container designs.

EMERGING TECHNOLOGIES - POTENTIAL FUTURE SOLUTIONS

- **eDNA and eRNA Testing**
 - Testing environmental samples such as dust or air for pest detection
 - If successful, can be used at critical control points
 - Can be applied to a variety of pests of concern
- **Biosecurity Automated Threat Detection System**
 - Cameras mounted on ship-to-shore cranes and applied machine learning to detect and identify the type of biosecurity risks in real-time
 - Several key findings from the trial in Australia
- **Hand-held hyperspectral camera**
 - machine learning and hyperspectral imaging technology, to detect and categorize potential biosecurity threats.
 - >95 % detection rate, but further development needed

NEXT STEPS

- Subject to data availability, assess the effectiveness and efficiency of the CPM Recommendation on Sea containers (R-06)
- Review all new, emerging and evolving technologies and opportunities.
- Continue to analyze potential regulatory and non-regulatory options in order to identify and describe a recommended option or options
- Provide recommendation to CPM on preferred regulatory and non-regulatory options including whether the development of an ISPM is feasible and desirable and draft specifications as necessary
- Develop an action plan and present it to The CPM Bureau for approval in October 2024

Refer to the ToR for a full list of functions

THANK YOU

QRM | 15–17 May 2024
